Yahoo Group summary: NAVTEX DXing

These Yahoo Groups messages were archived in WARC format by ArchiveTeam in 2018. This PDF was generated by Digital Library of Amateur Radio & Communications from the WARC files in 2026.

Date span: 2015-01-01 through 2015-12-31

Source WARC: navtexdx.Nzzz5Ch.warc.gz

Source item: https://archive.org/details/yahoo-groups-2018-09-05T04-59-17Z-290345

Messages included in this PDF: 2777

Message records with no body available in the source archive: 1

Yahoo replaced the domain portions of email addresses with @... in the archived messages. Characters lost in Yahoo's archived text appear as ?.

Messages are presented in ascending Yahoo message-ID order. Gaps indicate records absent from the source WARC or messages omitted from this PDF as spam.

9230. Navtex log from Antwerp,BEL 20150101

Yahoo group: navtexdx (2015)
Date: 2015-01-01 20:27:02 UTC
From: Dirk Claessens
Topic: 9230 Message: 9230

Hi all,
First off, a prosperous 2015 in good health to all!
Strange conditions once more. Weak and scrambled messages from Greece, nothing at all from Turkey,Haifa, but strong signals from the north!
Regards - Dirk

9233. NAVTEX from Les Alpes Maritimes, FRANCE

Yahoo group: navtexdx (2015)
Date: 2015-01-03 08:06:18 UTC
From: Frans.Vink@...
Topic: 9233 Message: 9233

Happy New Year!

A bit of everything, Middle East and the Nordic; pretty good conditions. Grindavik, ISL is a rare guest in my list.

Report from: Frans Vink
Receiver : Icom R70
Antenna : PA0DRT miniwhip (6m)
Decoder : YaND
Computer : Dell Inspiron 6400 with Sigmatel Internal soundcard

From: Frans.Vink@...
Topic: 9237 Message: 9237

Something in the air: I received six error less reports from Izmir in the early afternoon. A first ever...
I also had Ismailia at around 16.00 UTC, never seen that before either. At that time it is not dark yet over here.

The Middle East is back, back in force. I had at least twenty decodes from Ismailia and some 5 from Quseir. Strangely enough this combined with many errored receipts from Pinneberg (see last entry) and Den Helder, not a single error less receipt, actually no automatic recognition of any of the two.
I wonder what will happen today...

Report from: Frans Vink

9238. Re: [navtexdx] NAVTEX from Les Aples Maritimes FRANCE

Yahoo group: navtexdx (2015)
Date: 2015-01-04 18:19:34 UTC
From: Roelof Bakker
Topic: 9237 Message: 9238

Hello Frans,

Good propagation at daytime bode poor propagation the following night!
This time it is also probably the case!

The Kyoto Dst dropped to minus 60 over the day and the K index is -6!

73,
Roelof Bakker

9239. NAVTEX from Zealand, HOL

From: Roelof Bakker
Topic: 9033 Message: 9239

Hello all,

Amazing propagation as nothing at all was received from the Middle East!
There were far less UNID's in the log as usual, which is a bad sign!

NAVTEX 518 kHz over 1500 km:

Hello all,

Against all odds, K = 6 at the time of reception, three good decodes from VCO, Sydney, CAN NL were found. Otherwise propagation is still kind of weird; nothing from the Middle East yet!

NAVTEX 518 kHz over 1500 km:

9244. NAVTEX from Les Alpes Maritimes FRANCE

Yahoo group: navtexdx (2015)
Date: 2015-01-06 07:10:35 UTC
From: Frans.Vink@...
Topic: 9244 Message: 9244

Conditions seem to return to normal, nothing spectacular, nothing strange either, even Pinneberg and Den Helder returned, while Egypt disappeared.

Hello Dirk,

I believe that normal propagation anomalies as observed on LF do not fully apply to NAVTEX reception on 518 kHz. Long range NAVTEX reception, requires a clear channel or at least a situation where the DX station is (6 dB) stronger than other transmitting stations.

The last ten days I have found that for NDB reception, stations up to 1500 km have been strong and suffered little from fading. At times these were much stronger than usual and this is especially the case for stations below 1000 km.
Under "normal" winter conditions these stations are often complete gone, leaving a clear channel for the DX. The "time-out" time can last hours; also slow fading can be found.

As I mentioned before, YaND has produced very little UNID's lately and solid decoded messages from e.g. Rogaland, Gislovshammar, Varberg etc. The same is true for Portpatrick and other stations under 1000 km. My assumption is that the stronger "locals" suffered less from fading and have been blocking the DX stations.

Yesterday evening propagation seems to have changed to more normal behavior.

73,
Roelof Bakker

Guys, I have been searching for a logical connection between MW propagation for many months but I do not get any grip on it.

Since 7 october 2014 I have been logging daily SFI, SN, A, K and Aurora values together with the present weather conditions and antennas in use. I have compared this to my daily MW-dx recordings and some Navtex reception but can find almost no relation between these numbers.

Is there some reliable theory that can be trusted on. I don't think so as far as have noticed. At times I found it interresting but seems all my time is wasted in logging these values. I will keep up this for a number of months, but when I can find no relation by springtime I go and put my energy in something that is usefull.

Maybe my brain cannot compute this any more and are getting demented ;-)

Hello Ron,

Your timing for this research could not have been worse.
Conditions have been poor to very poor since you started your observations.
As there is no data for good propagation in that time frame, it is
impossible to make sensible conclusions.

The general rule is that for good LF / MW propagation solar flux should be
below 100 and that the last solar event is at least ten days ago. Neither
of these have been the case lately and as we are past the peak of solar
activity, the sun will not be quiet for some time to come.

The Kyoto Dst is also a good measure. It should be around 0 for ten days
to get really good propagation.

I hope this helps.

73,
Roelof Bakker, PA0RDT

Hi Roelof,

Yes, the SFI info was known to me, but I felt that there might be at least another factor in play. I had no decent MW reception since the end of August and when checking the propagation values from 11 october 2014 when dxa members had a dx-weekend in Walsoorden it made me confused as they told me that the reception on MW was one of the best they had at that location for a long time. That day produced a SFI of 136, but the aurora value was only 1.

I will include the Kyoto Dst readings in my log from now on. WHere can I find them on the net?

Hello Ron,

The Kyoto Dst information can be found here:

http://wdc.kugi.kyoto-u.ac.jp/dst_realtime/presentmonth/

It is also possible to view the data of the previous month.

Yes, the Aurora Index is also a good measure.
It should be less than 4 and lower is better.

Regarding the Walsoorden results, there are always exceptions to the general rules.
So, it is worthwhile to listen as often as possible.

Against all odds, I logged 35 Canadian NDB's in one night on July 17 last year.
This is one of the best nights ever, albeit in mid-summer!

Though in mid-winter now, I have to struggle to hear five!

73,
Roelof Bakker

Hello guys,

Jumping in about the Walsoorden results. When we said that the the results where best ever, it doesn't mean at all that propagation was at it best. Furthermore MW DXing isn't the same as Navtex DXing

In fact, as said on the Walsoorden blogspot, general conditions were not superb. That means that the regular TA MW-stations signal levels were not as good as the other times and fading in and out a lot of times. And that's what made it such a good DX-weekend. During those fade downs, other stations had the possibility to pop up. Furthermore, the chance that something like that happens on a whole MW band is of course bigger than on just one or two Navtex frequencies.

I have also compared propagation figures from that weekend with the weeks that followed when that very long dull period started. there wasn't a significant difference. It seems there are just too many factors involved. When comparing our catches with propagation values we often see coherence, but making conclusions the other ways around seems to be much more difficult.

73,

Guido.

I have also attached a short analysis of the terrible DX-conditions we have experienced since last october and the probable reason for it: the double-peak solar maximum.

Subject: Re: [navtexdx] Navtex log from Antwerp,BEL 20150106

Hi Roelof,

Yes, the SFI info was known to me, but I felt that there might be at least another factor in play. I had no decent MW reception since the end of August and when checking the propagation values from 11 october 2014 when dxa members had a dx-weekend in Walsoorden it made me confused as they told me that the reception on MW was one of the best they had at that location for a long time. That day produced a SFI of 136, but the aurora value was only 1.

I will include the Kyoto Dst readings in my log from now on. WHere can I find them on the net?

9265. Mini Whip at VLF

Yahoo group: navtexdx (2015)
Date: 2015-01-10 19:38:09 UTC
From: John Bruce McCreath
Topic: 9033 Message: 9265

Hi Roelof,

A question about the Mini Whip. Are there any mods I should do to a unit I built about 6 years ago to use it down at 10-20 kHz.? Specifically, would there be an advantage in increasing the value of the "antenna board" RFC along with the one in the D.C. injector? I've been using it mainly on the NDB frequencies, where it's been working great.

73, Bruce, VE3EAR

Bruce,

Which values are you using for the RC's and coupling capacitors?

73,
Roelof

9269. Re: [navtexdx] Mini Whip at VLF - values

Yahoo group: navtexdx (2015)
Date: 2015-01-10 22:32:13 UTC
From: John Bruce McCreath
Topic: 9033 Message: 9269

> Which values are you using for the RC's and coupling capacitors?

What ever was indicated in the schematic at that time, 6 years ago.
I'd have to open up both units to see for sure (difficult). That's why
I'm asking, as I don't want to open them unless required.

Thanks & 73, Bruce

Hello Dirk,

Propagation is recovering, but still weird.
Last night not a single decode from Grindavik was found.
The previous nights Grindavik was not decoded before the 23:50 UTC time slot.
However, it might be a different cause instead of propagation.

On an other note, just before X-mas I found that my phasing system used to get rid of local noise, became more and more difficult to adjust. It appeared that the noise has gone, resulting in a much lower noise level on both the mini-whip and loop. At the moment, the mini-whip gives much better results than the loop, which agrees with my earlier findings.

Looking at my PERSEUS waterfall display at NDB's at night, it is evident that it is not until 5 hours after sunset that more distant stations are coming in at good strength. I gather it takes quite a bit of time before the D-layer absorption is gone.

73,
Roelof Bakker

No Middle East, Arkhangelsk is rare in my list. Turkish Cyprus is becoming a regular.

9279. Navtex log from Antwerp,BEL

Yahoo group: navtexdx (2015)
Date: 2015-01-13 18:46:35 UTC
From: Dirk Claessens
Topic: 9279 Message: 9279

Hi all,
Slightly improved conditions, but still no T/A.Porto Santo in 2 time slots was a nice surprise though.

Regards - Dirk

Hello Dirk,

I had one fragment which mentioned New Brunswick, but it was too vague to nail it too a particular station.

The amazing thing is that last night propagation above 48 degrees north was amazing. I logged 21 Canadian NDB's and one from Alaska.
However, there are no active NAVTEX stations located above that latitude.

Sydney is located about 46 degrees north, so with a bit of luck the upcoming night might be better!

73,
Roelof

Hi Roelof,
Indeed, propagation from the North (in Europe) has been good the last week or so.Dst is slowly recovering and is currently around -10
Daily SIDC estimated sun spot number is ~75. Let's hope it takes a further dive...
Regards - Dirk

Hello Frans,
Thanks for the info, but can you confirm the test message was received on 518 KHz?It should be 490 KHz, according to this IHO document:
http://www.google.be/url?sa=t&rct=j&q=&esrc=s&source=web&cd=3&cad=rja&uact=8&ved=0CC4QFjAC&url=http%3A%2F%2Fwww.iho.int%2Fmtg_docs%2Fcom_wg%2FCPRNW%2FWWNWS5%2FWWNWS5-3-3-1.1%2520-%2520Submission%2520by%2520Italy.pdf&ei=UuC3VOPNLcSrPPLIgZgK&usg=AFQjCNG-ixKP_ITmGIVcDpf2IZZcmIBbXQ&sig2=9SurkDwlcXWLgMqDcGL_gA&bvm=bv.83640239,d.ZWU

"The new NAVTEX station will be located in Piombino (see Annex 1). The coverage estimated range in maximum ground noise conditions is about 250 KM. The coverage area in medium conditions of propagation is about 600 KM. Piombino station will broadcast MSI in English language on frequency 490Khz and will become fully operational by the end of 2014."
Thanks & regards - Dirk

Dirk et all,

Yes, I confirm it was received on 518 kHz. The message was in English, so makes sense it it on 518 kHz.

From: Roelof Bakker
Topic: 9033 Message: 9288

Hello all,

Looking at my NAVTEX log, it seems that there is no end to the poor T/A propagation.
However, this is only partly true.

Propagation above 50 degrees north from Canada has been excellent the last days.
It is a pity that there are no T/A NAVTEX stations up north.
On this side of the pond Bodo, Vardo and Archangelks are doing very well indeed.

I believe that the difference is caused by the fact that the further north you go the shorter the sun is shining and consequencly the daytime D-layer is weaker. There seems to be a fine balance and observing NDB reception, propagation is moving to the south until the K-index rises again.
It is fascinating to see how well this agrees with the info here:

http://dk0wcy.de/magnetogram/

The "Current K" graph is interesting. Dark green is good and yellow and red are poor.

It pays off to watch different stations at LF. On WSPR 477 kHz, no T/A reception has been seen for weeks, just like on NAVTEX 518 kHz.

I replayed my PERSEUS recoring from last night and found a long message from Sydney.
It started 2 dB over the decoding threshold. The signal very gradually decreased in strength and at last decoding stopped.

We will have to wait for the K-index to stay low for a prolonged time.
It is also amazing that nothing is received from Puorto Rico at the moment.

NAVTEX 518 kHz over 1500 km:

From: Dirk Claessens
Topic: 9033 Message: 9291

Hi Roelof,
Received here in that time frame on the whip:
2015-01-16 03:56:45 00> {}DX~~ EX~~T FNUQ~X~V~Z~Q~AS~ZTUM~~~~~{}
2015-01-16 04:02:54 12> S ~~Z~~~~{}H~PY~A~~~~{}KZTYWU~~~~~K~{}ABW~YI~~~~V~{}
T/A seems to fall off sharply once beyond the coastal areas.
Regards - Dirk

9298. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-01-18 10:29:20 UTC
From: Roelof Bakker
Topic: 9033 Message: 9298

Hello all,

I messed up my antennas last night and as a consequence no reception
happened on my mini-whip antenna.
Hence a short log.
However, NAVTEX Canada is back with four stations in the log:

NAVTEX 518 kHz over 1500 km:

```
20150117 1551 518 $01X TFA Grindavik,ISL 2045

9300. Navtex log from Antwerp,BEL 20150118

Yahoo group: navtexdx (2015)
Date: 2015-01-18 20:39:08 UTC
From: Dirk Claessens
Topic: 9300 Message: 9300

Hi all,
Very weird conditions again, and quite localized it seems.
Roelof and Vincent logged T/A, but absolutely not even a trace of it here.But then I logged Ismailia,Sao Miguel and Arkhankelsk which they didn't log.Way over my head...

Regards - Dirk

Foristell, Missouri
Receiver: ICOM R-75
Antenna: Clifton Z1501 active, base up 25 foot, 10 foot whip

First time to try Navtex for a while with good results. Interesting
that
Upernavik doesn't know what date it is. This was received on the 19th
as indicated in the first part of the transmission. No sign of the header
for Simiutaq
was logged, just the message.

9305. Navtex from W Scotland - Logs REU

Yahoo group: navtexdx (2015)
Date: 2015-01-20 11:50:54 UTC
From: david
Topic: 9305 Message: 9305

Back to Navtex, after quite a break, so here are logs from everyday stations to set a starting point.
I had to edit out repeat logs by hand. I hope I left in all the ones that should be there ;-)

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, Argyll, IO75jv (55°54'18"N 005°14'07"W)
Report Created On Jan 20, 2015
Receiver(s): Cubic 3030
Antenna(s): AMRAD Whip at 5m
Software: YaND
Report Sorted by Freq in Ascending order

9306. NA-Log from Foristell, MO 1/20

Yahoo group: navtexdx (2015)
Date: 2015-01-20 12:59:09 UTC
From: PalmerRD@...
Topic: 9306 Message: 9306

Foristell, Missouri
A couple more different last night than the night before. 100% copy of messages from
Curacao didn't make much sense. Are these new lighthouses?

9308. Re: [navtexdx] Navtex from W Scotland - Logs REU

Yahoo group: navtexdx (2015)
Date: 2015-01-20 18:12:08 UTC
From: Roelof Bakker
Topic: 9305 Message: 9308

Hello David,

Logging is easier by holding the <Shift> key and pressing the left mouse button over a message in the <UTC RECEIVED> column. It will appear under the tap <Report>.

As you did not log a single Canadian in Scotland, I gather propagation must have been poor from that direction. I found long stringsd of perfect decodes from Novorossiysk, Bodo, Vardo and Archangelsk.

NAVTEX 518 kHz over 1500 km:

9309. Torshavn out??

Yahoo group: navtexdx (2015)
Date: 2015-01-20 19:05:24 UTC
From: Dirk Claessens
Topic: 9309 Message: 9309

Hi all,
I just noticed Torshavn has totally disappeared from my logs a few days ago.Last report here (and on REU) was Jan 9th by Frans.
I don't think this is propagation related, as from my QTH the station is on a 95% path over salt water, so I can receive it 24/7 all year round.
No info found on internet.
Regards - Dirk

9310. Navtex log from Antwerp,BEL 20150120

Hi Steve,
I have checked 2 and 5Mc DSC channels around 1300 UTC.Nothing seen, alerts if any were probably already sent and handled.
Regards - Dirk

Hi Dirk,

Thanks, was by sheer chance I switched from DSC for a bit and the Mayday came up.
As you rightly say its probably been dealt with ;)

Regards..
Steve

Hi Dirk,

Forgot to say it was clocked again at 12.40pm Niton 518khz

Not too sure if Niton would give all clear when resolved.....just curious;)

Regards
Steve

Hi Steve,
Search was called after 4 hours.North Sea is now 8..10 degrees C. Survival time 30..60 minutes...Sad story
Regards - Dirk

Subject: Re: [navtexdx] Mayday

  Hi Dirk,
Sorry to keep sending odd messages....the link below ends all really...search called off sadly...

http://www.islandecho.co.uk/news/lifeboat-launched-reports-missing-woman
Best regards..Steve

Thanks Dirk,

Sad indeed and cold temp water.....

Was strange how Navtex picked up the message.....just goes to prove how diverse Navtex can be...

Regards..
Steve

Hi Dick....you did better than I did last night. The only "DX" that I decoded was NMA, Miami, Florida. Hoping for better conditions for the coming weekend.

Hi Roelof,
Below is what I caught from Sydney at that time.By taking Vincent's log and a lot of fantasy I could discern the scattered remains of "OCEANOGRAPHIC MOORINGS DEPLOYED" in my copy. It's as if Canadian T/A is landing 50 Km north of my QTH.
Propagation FROM the north has been outstanding though. Bodo and Vardo could be logged daily on the whip,and in both the 00:10 and 04:10 time slots without interference from Alger.

Regards - Dirk

9328. Mondolfo during daylight

Yahoo group: navtexdx (2015)
Date: 2015-01-22 20:27:44 UTC
From: R.Connolly
Topic: 9328 Message: 9328

Hi,

I have not done any navtex decoding since early December and yesterday set up the system to monitor 518 kHz. Earlier today I was having a quick look at yesterday's received decodes and noticed excellent reception from Mondolfo, Italy at 1521. This is the first time I have seen Mondolfo appear during daylight here and my initial thought was that perhaps it was grey-line propagation but when I subsequently checked to see if this was the case I saw that the grey line was still an hour away and Italy was still in daylight. Mondolfo frequently produces good signals here often starting in early evening but to receive it mid-afternoon was a first for me here.

Robert GI7IVX

Hi Robert,

Yes indeed quite rare in daytime, although have to confess that during day do not always chase Navtex but maybe others can claim a daytime hit for Mondolfo.

My past logs show Mondolfo at about 23.20 - 23-30pm on several occasions;)

9334. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-01-23 18:08:52 UTC
From: Roelof Bakker
Topic: 9033 Message: 9334

Hello Dirk,

Things looks much better at the moment and I gather that you must have found some T/A now.
Puorto Rico is back and I also found a couple of excellent Canadian decodes.

NAVTEX 518 kHz over 1500 km:

Hello all,

Over the last few weeks, I have been busy building a new PC.
As usual, putting the hardware together was far less time consuming than setting up the software. The operating system is Windows 7, Professional 64 bits.

Anyway, the beast is running as it should producing no electrical or aural noise. The only problem encountered was my external EMU202 soundcard, that refused to work connected to a USB2 port, whilst USB3 was enabled. Changing the XHCI setting in the UEFI to disabled, solved the problem.

Installing the PERSEUS and Afedri was no problem at all.
At the moment I am running NAVTEX on the Afedri and pa0rdt-Mini-Whip©.

For a long time, I have had the intention to build a couple of hardware receivers dedicated for
NAVTEX on 490 and 518 kHz. However, there seem to come up other issues all the time.
I have the Studio 1 software lying unused, so the idea is to set up two software receivers in
Studio 1 on the Afedri hardware; one for 490 kHz and the other for 518 kHz.

The simplest way (for me) is to use a couple of cheap USB sound dongles.
These work very well with YaND and is no hassle at all.

I wonder if there is any advantage in using VAC for this purpose.
Is anyone using VAC and how does it perform?

73,
Roelof Bakker

Roelof,

Last year I tested Studio1 with two external soundcard (Behringer) UCA202) and my Perseus. The reason for the soundcards was that VAC gives some noise on the audio. Now I'm back with 1 computer, 1 soundcard (internal), the Perseus, VAC, Studio 1 and two YaND's. For me this works fine.

What are your plans for a dedicated NAVTEX receiver? Will it be a SDR receiver? Than I'm intrested!

Vincent

Hi Roelof,
I'm using VAC here (registered version).The only issue is occasional "brabbling" of YaND, even for strong stations like Ostend.I have done exhaustive comparative tests and am sure it is related to VAC loosing the pedals every now and then (~4..5 times each night). The phenomenon could never be observed when mike or line-in were connected to the headphone output.
T/A is still nope here. As I wrote earlier, it seems T/A is landing north of my QTH.Another DXA-member has also reported absent/very weak MW BC band T/A reception since begin december. I guess I will have to sit it out...
Regards - Dirk

I wonder if there is any advantage in using VAC for this purpose.
Is anyone using VAC and how does it perform?

From: roelof@...
Topic: 9033 Message: 9340

Hello Vincent and Dirk,

Thank you both for your answers.
At the moment Studio 1 is running a receiver on 490 kHz and an other one on 518 kHz using the Afedri SDR hardware. I have two instances of YaND running as well, so NAVTEX on 490 kHz and 518 kHz can be monitored now.

For audio out to YaND, I use a USB sound dongle and my EMU-202.
This works fine, so I gather that I will order a couple of cheap USB dongles.
Anyway, this is cheaper than the Euro 30 fee for the registered version of VAC.

Last night NAVTEX 518 khz was rather poor here:

```
20150123 1551 518 $01X TFA Grindavik,ISL 2114
20150123 2008 518 $19B LGP Bodo,NOR 1865
20150123 2011 518 $19C LGV Vardo,NOR 2541
20150123 2142 518 $03K SVK Kerkyra,GRC 1748
20150124 0131 518 $03J LZW Varna,BUL 1927
```

It was received on my Mini-Whip and Afedri and SDRConsole.

73,
Roelof Bakker

9344. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-01-26 11:36:44 UTC
From: roelof@...
Topic: 9033 Message: 9344

Hello all,

Last night I have been testdriving The Afedri / Studio 1 / VAC combination on 490 kHz and 518 kHz NAVTEX.

Using VAC, I run first into problems as with two cables enabled, the first one was also connected to my PERSEUS SDR. So when also listening on the PERSEUS, its output was directed to YaND, besides the output from Studio 1 RX1.
I don't know if this is a feature of VAC to conect cable 1 to the standard Window sound channel. Anyway, setting up three cables in VAC and using number 2 and 3 for Studio, solved the problem. Maybe the Creative drivers of the EMU-0202 are causing problems.
One time the PC closed down sponteneously and later on the dreaded BSOD appeared, which I have not seen for ages.

I have ordered 10 (!) USB sound dongles from the Far East for the capital sum of Euro 11,69 and free shipping! In due course, I will report my findings using these.

Full log NAVTEX 490 kHz:

```
20150125 1902 490 $03S FRL La Garde,FRA 842

From: roelof@...
Topic: 9033 Message: 9347

Hello all,

Today, I have been looking at a cheap USB sound card that I had at hand.
To use it for NAVTEX decoding, you need a 3.5 mm stereo cable to link the headphone out to the microphone in. The units I ordered are very cheap and the cost of an interlink cable is
more than the USB sound card itself. Which seems a bit weird, if you ask me.

I found that the case can be opened (and closed) very easy.
Inside is a small PCB with a multi leg IC, a 32 kHz X-tal and two 3.5 mm stereo jacks.
On the underside of the board is ample room to solder jumper wires between the stereo jacks, eliminating the need for an external link cable.
So all I have to do is plug it in a free USB port and it works!

On an other note, daytime propagation was excellent today.

20150126 1208 518 $19B LGP Bodo,NOR 1839
20150126 1221 518 $19C LGV Vardo,NOR 2527
20150126 1311 518 $01H SAH Bjuroklubb,SWE 1756

So, I gather this set up is working as it should.

73,
Roelof

Hi Roelof,
- I'm very unsure that VAC is needed to connect a Studio 1 VRX to Yand.IIRC it was Vincent Schriel (??) who explained here in the group that each VRX is selectable from within Yand as a sound input without further ado. Most likely you will need to setup the VRX output settings to achieve this.

- The linking of Perseus' output to a VAC cable is special. VAC will only "see" licensed input sources. Microtelecom have a license agreement with VAC's author Eugene, so the Perseus client software will send the audio directly to the speaker and to VAC. (which is why one can disable Perseus' sound output without affecting the decoder's input)
Regards - Dirk

Using VAC, I run first into problems as with two cables enabled, the first one was also connected to my PERSEUS SDR. So when also listening on the PERSEUS, its output was directed to YaND, besides the output from Studio 1 RX1.I don't know if this is a feature of VAC to conect cable 1 to the standard Window sound channel. Anyway, setting up three cables in VAC and using number 2 and 3 for Studio, solved the problem. Maybe the Creative drivers of the EMU-0202 are causing problems.One time the PC closed down sponteneously and later on the dreaded BSOD appeared, which I have not seen for ages.
I have ordered 10 (!) USB sound dongles from the Far East for the capital sum of Euro 11,69 and free shipping! In due course, I will report my findings using these.

It is needed. I have two virtual cables, for each vrx one. In YaND I
select cable1 for 490, cable2 for 518. You select them in RX, Sett. and
OUT.

It was a terrible night for Natex in Rotterdam:

Hello Dirk,

>>>
- The linking of Perseus' output to a VAC cable is special. VAC will only "see" licensed input sources. Microtelecom have a license agreement with VAC's author Eugene, so the Perseus client software will send the audio directly to the speaker and to VAC. (which is why one can disable Perseus' sound output without affecting the decoder's input)
<<<

Thank you; this explains the (weird) behaviour.
I gather you cannot disable sending the Perseus audio to VAC.

This PC is meant to run a lot of software radios simultaneous.
It uses an Intel i7-4790 at 3.6 GHz and for the time being 8GB RAM.
It has also a 250 GB SSD (Samsung EVO840) for the operating system etc.
It is fast and should be OK for years to come!

73,
Roelof

Hi Roelof,
No, it cannot be disabled. It's kind of "hardwired".Vincent mentioned that VAC is also needed for Studio 1; this means they also have a license.So, from within Studio 1 you should be able to connect each VRX to the desired VAC cable.
Fine busuines your new system!
Regards - Dirk

Thanks for the hint, Dirk!

I caught Irakleion in the “S”-slot at 0300 UTC also last night.

A new one here!

9357. Log 518 kHz, Rotterdam, HOL

Yahoo group: navtexdx (2015)
Date: 2015-01-27 16:38:56 UTC
From: Vincent Schriel
Topic: 9357 Message: 9357

I had some problems with Studio 1 yesterday. Last night I used the Perseus software on 518 kHz. Three different stations from Canada.

Hi Dirk,

Interesting new one, will look out for it.....yes nice change from 518 490 ;)

Dirk (according to Navtex View) a few Chinese stations transmit on 486kHz and a couple of Japanese on 424kHz, it there any reality of picking these up from here in UK? or is this wishful thinking?

Regards...
Steve

Hi Steve,
I have logged the Japanese stations Naha and Moji on 518 back in september 2009 during the last solar minimum. Today chances chances are virtually zero.Also note that Yand will not decode these transmissions, as a special character code set is used by Japanese stations. Only the Frisnit decoder can display katakana characters.

Below is what I just catched on 4209.5 KHz. A pity I wasn't in the shack 1/2 hour earlier.4 MHz can be an interesting band at times.
Regards - Dirk

Steve,
Logged yesterday, also on 4MHz: station unknown, but definitely Vietnamese.
Very weak, but with improving conditions...
Regards - Dirk

Betreff: Re: [navtexdx] Re: 4209.5 KHz for a change

Hi Steve,

I have logged the Japanese stations Naha and Moji on 518 back in september 2009 during the last solar minimum. Today chances chances are virtually zero.

Also note that Yand will not decode these transmissions, as a special character code set is used by Japanese stations. Only the Frisnit decoder can display katakana characters.

Below is what I just catched on 4209.5 KHz. A pity I wasn't in the shack 1/2 hour earlier.

4 MHz can be an interesting band at times.

Regards - Dirk

Subject: [navtexdx] Re: 4209.5 KHz for a change

Hi Dirk,

Interesting new one, will look out for it.....yes nice change from 518 490 ;)

Dirk (according to Navtex View) a few Chinese stations transmit on 486kHz and a couple of Japanese on 424kHz, it there any reality of picking these up from here in UK? or is this wishful thinking?

Regards...

Steve

9362. 4209.5 - SVH - Heraklion - GRC

Yahoo group: navtexdx (2015)

9363. Navtex log from Antwerp,BEL 20150127

Yahoo group: navtexdx (2015)
Date: 2015-01-27 19:34:36 UTC
From: Dirk Claessens
Topic: 9363 Message: 9363

Hi all,
Finally T/A turned south slightly, and has come my way.Fundy was a surprise; previous log here was on jan 22 2013.
Regards - Dirk

Betreff: Re: [navtexdx] Re: 4209.5 KHz for a change Hi Steve, I have logged the Japanese stations Naha and Moji on 518 back in september 2009 during the last solar minimum. Today chances chances are virtually zero.Also note that Yand will not decode these transmissions, as a special character code set is used by Japanese stations. Only the Frisnit decoder can display katakana characters. Below is what I just catched on 4209.5 KHz. A pity I wasn't in the shack 1/2 hour earlier.4 MHz can be an interesting band at times. Hi Dirk,

Thanks.....interesting;)

Your previous message was probably Nha Trang Vietnam UTC 20.20

Thanks about Naha and Moji in 2009 and katakana characters...

Just looking at William Hepburn site http://www.dxinfocentre.com and have not got my head round so many frequencies from 3MHz to 22MHz and would be interesting to find out just how many of this lot is receivable;))
Does mention MSI Updates including Greece-China 2014-07-26 on 4209.5kHz

Just clocked Greece 4209.5kHz

From: stevesden1@...
Topic: 9366 Message: 9366

Hi all...

I note on the excellent William Hepburn's site DX Info Centre http://www.dxinfocentre.com

http://www.dxinfocentre.com

DX Info Centre http://www.dxinfocentre.com BROADCAST LW / MW SW VHF-LO FM TV WORLD CALL SIGNS HDT-1 : CAN FM c/s CBC / SRC TIME SIGNALS

View on www.dxinfocentre.com http://www.dxinfocentre.com
Preview by Yahoo

That on the Marine section, 2 selections, Navtex and HF MSI.

The frequency range of HF MSI 4.209.5 Mhz for me is well known but interested in the whole range up to 22Mhz and the possibility for YaND to decode other frequencies apart from 4.209.5 Mhz 518kHz and 490kHz.

I accept that some of these frequencies may well be broadcast mode...

Have used 518kHz 490kHz and 4.209.5 Mhz for sometime, just wondering about the possibilities of expanding the range of available Navtex decoding...?

The headings of International HF NBDP MSI and International HF NAVDAT , if anyone has the explanation of these 2 and the difference, I would be very grateful;)

Best regards..

Steve

9367. NAVTEX from Zealand, HOL

Hello all,

No report for NAVTEX 490 kHz as I messed something up.
VAC showed an overflow figure of 124.

Running 490 kHz and 518 kHz on two VRX's on Studio 1 requires a careful check at start up.
So far it is not yet set and forget!

NAVTEX 518 kHz over 1500 km:

9369. A new one in Foristell, MO

Yahoo group: navtexdx (2015)
Date: 2015-01-28 15:34:34 UTC
From: PalmerRD@...
Topic: 9369 Message: 9369

Foristell, Missouri
Although not very good copy, this may be the new station located in
Heraklion,
Greece. Any comments from our European listeners?

2015-01-28 0224 4209.5 $03M Istanbul, Turkey
2015-01-28 0305 4209.5 $03S Heraklion, Greece, all time NEW

9372. Navtex Logs from W Scotland - 518kc/s

Yahoo group: navtexdx (2015)
Date: 2015-01-28 17:45:52 UTC
From: david
Topic: 9372 Message: 9372

Propagation continues to be poor out on the Western fringes. Hail, wind, and snow, but few intelligible signals. I keep trying different settings, but it is hard to tell if they make a difference or if it just the ionosphere and my environment.
I planted a hawthorn last autumn. Perhaps that will help.

Hi David,

Yes lot of folklore around Hawthorn tree.....me thinks the bad luck is if you cut it down;)
What sort of settings are you using?

Beautiful part of world you live in but probably not that today with weather;)

Regards..
Steve

9375. Re: [navtexdx] Navtex-HF MSI

Yahoo group: navtexdx (2015)

From: Dirk Claessens
Topic: 9366 Message: 9375

Hi Steve,
Formally, only 518 and 490 are Navtex frequencies (518 in English, 490 in local language)Navtex transmission schedules are internationally regulated/coordinated by the Navtex board of the IHO. Message format (ZCZC XYnn ...message... NNNN) is mandatory as well.
All the above is not applicable to HF NBDP (Narrow Band Direct Printing Telegraphy)On HF, some stations use the standard Navtex message format, others don't (USCG, Turkey)For instance, NRV Guam on 12MHz will start transmissions with:
2011-10-13 14:46:56> CQ CQ CQ DE NMC/NRV NMC/NRV NMC/NRV
2011-10-13 14:47:05> RYRYRYRYRYRYRYURYRYRYRYRYRYRYRYRYRY
2011-10-13 14:47:15> RYRYRYRJFA~RYRYRYRYRYRYRYRYEYRYRYRYRY
2011-10-13 14:47:19> TESTING DE D
2011-10-13 15:01:47> C VAJJJJ:{}~~~~
2011-10-13 15:01:56> CQ CQ CQ DE NMC/NRV NMC/NRV NMC/NRV
2011-10-13 15:02:15> CQ CQ CQ DE N~MC/NRV NMC/~~NRV NMC/NRV
2011-10-13 15:02:24> CQ CQ CQ DE NMC/NRV NMC/NRV~NMC/NRV
2011-10-13 15:02:25> BT
2011-10-13 15:02:35> THROUGH REMOTE EQUIPMENT IN GUAM (NRV),
2011-10-13 15:02:57> USCG CAMSPAC PT REY~S CA (NMC) SELCALL ~1096, MID 003669990,
2011-10-13 15:03:10> HAS INSTALLED THE HF AUTOMATED SITOR SYSTEM.
2011-10-13 15:03:10>
After that, subsequent messages may or may not start/end with ZCZC/NNNNUSCG also very frequently re-broadcast messages on HF, messages originally sent from European/Asian/etc. stations on... 518KHz! This makes auto-IDing those messages impossible.Which keywords should be used??
Example from Boston on 8MHz:
17:13:36> ZCZC FA45
17:13:42> MSGID/GENADMIN/NGA NAVSAFETY BETHESDA MD//
17:13:43> RMKS/
17:13:47> HYDROLANT 402/11(36).
17:13:52> ENGLAND-SOUTHWEST COAST.
17:14:02> 1. DERELICT 18 METER F/V ADRIFT IN 50-13.7N 006-05.7W
17:14:04> AT 110648Z MAR.
17:14:11> 2. CANCEL THIS MSG 140825Z MAR.//
17:14:12>
17:14:12> NNNN

In short, on HF, puzzling and head-scratching is again needed, as in the old days... :o)
Regards - Dirk

Subject: [navtexdx] Navtex-HF MSI

Hi all...
I note on the excellent William Hepburn's site DX Info Centre
| |
| | | | DX Info Centre BROADCAST LW / MW SW VHF-LO FM TV WORLD CALL SIGNS HDT-1 : CAN FM c/s CBC / SRC TIME SIGNALS | |
| View on www.dxinfocentre.com | Preview by Yahoo |
| |

That on the Marine section, 2 selections, Navtex and HF MSI.
The frequency range of HF MSI 4.209.5 Mhz for me is well known but interested in the whole range up to 22Mhz and the possibility for YaND to decode other frequencies apart from 4.209.5 Mhz 518kHz and 490kHz.
I accept that some of these frequencies may well be broadcast mode...
Have used 518kHz 490kHz and 4.209.5 Mhz for sometime, just wondering about the possibilities of expanding the range of available Navtex decoding...?
The headings of International HF NBDP MSI and International HF NAVDAT , if anyone has the explanation of these 2 and the difference, I would be very grateful;)
Best regards..
Steve

Topic: 9372 Message: 9376

Hi David,
Propagation on MW has been very poor the last months.I keep thinking something must be wrong with my antennas and/or receivers :0)
We are currently experiencing the nasty effects of a solar maximum.The only positive point is: it cannot get any worse.
So maybe your settings are fine...
Regards - Dirk

Propagation continues to be poor out on the Western fringes. Hail, wind, and snow, but few intelligible signals. I keep trying different settings, but it is hard to tell if they make a difference or if it just the ionosphere and my environment.
I planted a hawthorn last autumn. Perhaps that will help.

Hi Dirk,

Thanks for info and great examples, you are indeed have a wealth of experience and information;)

As soon as you mentioned HF NBDP (Narrow Band Direct Printing Telegraphy) I remembered about a year ago messaging Alan Gale and his excellent site about HF NBDP frequencies...
So thanks for the reminder about HF NBDP.....must of been over a year.....things one forgets)

I feel its good to have a bit of diversity with this fascinating mode.....keeps the spirit alive))
As you rightly say.....on HF, puzzling and head-scratching is again needed, as in the old days... :o)

Best regards and thanks for the enlightening info!

Steve

9380. Navtex Log from W Scotland - 490 kHz

Yahoo group: navtexdx (2015)
Date: 2015-01-29 13:00:34 UTC
From: david
Topic: 9380 Message: 9380

Decided to find out if 490 was no better than 518kHz

These are all the stations logged in a 24hr session. I have a constant tone right on 490.0 that doesn't help. I think it is very local, but even operating on batteries doesn't remove it. An audio notch is next on the list. The two data tones straddle it, so there should be hope for a resolution. In the mean time, this is what overcame the tone.

Hi David,
Is the tone present in daytime as well? If it is, the source is probably local.If it is only present at night and in winter, this is "normal", I can observe it here as well, near Antwerp,Belgium. Several NDB's are active on and around 490 so what you see is the carrier of one (or several) of them.
On 518 the tone sidebands of ARD Arad,ROU and JBR Jaszbereny,HNG can often be clearly seen/heard during winter. This usually indicates favorable conditions from the east.
Regards - Dirk

Local noise can be a real pain and when I moved to ALA Loop that did cut out a great deal.
The Loop gives high gain and antenna attenuator is essential with the Winradio I use..
Do you use CW or USB?

Might/not be of interest that I use CW with filter 500Hz and Bandwidth 0.400khz - 0.500khz and Tone 600-800Hz
CW for me does do away with the USB frequency offsets....seems a quieter signal;)

Guess everyone has their preferred settings with their location, propagation and type of radio.

Regards..
Steve

Hi Bob,
ID-letter H was assigned to both Prescott and Curacao for Navarea IV.If Yand doesn't see any keywords - as is the case for your message - it will take the first H-station it finds for Navarea 4.You should add CURACAO and WATAMULA to 4H Curacao's keyword list, and then in the log again enforce 4H.

Hi Dirk,

I was surprised that the Station Name CURACAO which is, in fact, in the message, is not recognised as a " KeyWord "

Can actual Station Names be included as Geographical or Unique keywords ?

Many Thanks

Bob

Hi Dirk and Steve,

Thanks for the feedback. Here are a few more details.
The tone is there 24/7. It is certainly local -- probably somewhere in the house;-(I can see it in YaND and in Spectran. I found an elderly Timewave DSP filter in the back of a cupboard, and I am going to try using its RTTY remodulator in a few minutes, because that has a notch at the carrier frequency.

For beacons, I use a Perseus or Excalibur with an audio filter and headphones. I don't have StereoMix or a Virtual Audio cable, so I use a separate receiver for Navtex and DGPS.
I have two Cubic3030 units in the rack. All four receivers (each unit is two RXs) produce the same effects. They were recently realigned, and have an external GPS standard facility. With or without the external standard, I see the same.
The receiver in use is set for CW, 500Hz bandwidth. I am using a tone of 1500Hz. This is always a cause of controversy amongst listeners. For beacons, I prefer 400Hz because it is easier to discriminate between close transmissions and because it matches the tone you get in AM for most of my locals. Bev M-Smith, who wrote DSC Decoder, said that decoder was optimised for 1700Hz. That is what I use, but I hate listening to it. For YaND, I chose something that was in the middle of the Spectrum display and went for 1500Hz. Informed advice would be welcome.
The Cubic produces balanced audio output, and I run that through an isolation transformer. I tried using a 599zx DSP filter, but the receiver produces a higher (fixed) level of audio than the filter likes so I have been feeding directly into a M-Audio delta44 soundcard. I calibrated the card with YaND on a long transmission from my most local transmitter site.

I have an ALA100 loop that is installed pointing SE / NW. Good for Southern Europe and terrible for the East or West and for Scandinavia. So I use the active whips for unattended listening. I have found the second ALA100 and, when the weather clears, I will install it perpendicular to the first one. That still leaves me with the need to switch between them.

By the way, Steve, the reference to the Hawthorn tree was a gentle dig at Roelof, who seems to have astounding reception with his mini-whip mounted in one. I was appalled at the performance of an early mini-whip I built, and had a lengthy exchange of emails with Roelof about it. In the end, I sent it to him for testing. He put it up at his home, and promptly received Canadian beacons with it. At the time, he was using Magnolias, but says he now gets success with hawthorns. I'll try anything ;-)

I'm going to keep trying. There could be a fundamental flaw in the set-up, here. I'll keep looking. All the local power and telephones are carried on

poles, which is an issue for putting up antennas as well as for QRM. If the notch filter doesn't work, I might be forced to drive into the hills and try to make a recording.

I hope Dirk is right, and reception can only get better.

Best Wishes

David GM8XBZ

Subject: [navtexdx] Re: Navtex Log from W Scotland - 490 kHz

Local noise can be a real pain and when I moved to ALA Loop that did cut out a great deal.

The Loop gives high gain and antenna attenuator is essential with the Winradio I use..

Do you use CW or USB?

Might/not be of interest that I use CW with filter 500Hz and Bandwidth 0.400khz - 0.500khz and Tone 600-800Hz

CW for me does do away with the USB frequency offsets....seems a quieter signal;)

Guess everyone has their preferred settings with their location, propagation and type of radio.

Regards..

Steve

David,

I have a weak carrier on 518 khz on my Afedri SDR.
However only when I use Studio 1.
It is not there when using SDRConsole.
No antenna connected.

When I connect the antenna, it is largely swamped by the band noise!

73,
Roelof Bakker

From: Dirk Claessens
Topic: 9366 Message: 9390

Hi Bob,
In my database only ARUBA and NETHERLANDS ANTILLES are present for Curacao as geographical keywords. (I have only logged the station once here :0)
The best to do is add CURACAO as a geographical keyword.Unique keywords should be really truly unique. CURACAO by itself is dangerous, as other stations in the area might use it in weather forecasts. ("high pressure ridge over Curacao")
CURACAO RADIO and/or CURACAORADIO are fine IF the station is using them. Check your logs.
Regards - Dirk

Subject: Re: [navtexdx] Navtex-from Isle of Wight-CURACAO

Hi Dirk,
I was surprised that the Station Name CURACAO which is, in fact, in the message, is not recognised as a " KeyWord "
Can actual Station Names be included as Geographical or Unique keywords ?
Many Thanks
Bob

Hi David,

Thanks for all the details. I googled the Cubic3030 and it seems to be a professional receiver!
Your settings are fine. 4..500Hz IF BW is optimal for Navtex.
Yand doesn't care about the absolute audio tone frequency; when the user changes the setting, the filter parameters are simply re-calculated, there is no optimal setting. The 1700Hz convention is a leftover from days long gone (SSB offset etc...)

On the Perseus I use RTTY mode, straight and simple, no messing with frequency offsets.

The PA0RDT whip here is mounted on a 5 meter 50mm diameter PVC pole, with guy wires at 2 meter. The coax is ground at the base of the pole with 3 x 1.5 meter copper tubes. The coax is buried at ~ 25cm, and once then inside the house runs straight to the shack on the first floor.

The loop was build by Roelof for me from a deceased ALA. Preamp design from Chavdar LZ1AQ, modified/optimized by Roelof. Feed line is unshielded CAT5.
Works also great.

The tone you observe is a bit of a mystery...
"Normal" QRM is buzzing,hissing and mostly wideband. The classical tip applicable here is trying to DF/locate it with a portable Sony?

Regards - Dirk

Hi David,

Your welcome to shared experiences with settings etc....one of the great things about this mode is the experimenting side..as also with HFDL DSC DGPS etc.....

You indeed have a good setup and personal experience.....

As far as Navtex decoding goes then YaND is King of the hill and other decoders don't even come close in comparison with accuracy, and combining features for the most ardent of users...

Dirk as always on hand with his unquestionable experience and patience as other members of this group have too;)

I note from Dirks previous conversation he uses Perseus with RTTY mode where as on Winradio which has no defined RTTY mode then for me CW comes into play...

One asset of Winradio is using its Virtual Sound Card so can decode 518 with that and 490 on laptop sound card.
So get best of both 518kHz and 490kHz decoding...

Winradio G31DDC will allow 3 separate receivers with their unique settings although they have to be within the max DDC Bandwidth of 2Meg.
More expensive versions have much larger DDC Bandwidth (you probably know all this stuff;)

Winradio does have FSK mode which gives good decode on 1900Hz tone, great for Navtex etc and excellent for DXFax (got nice couple from Boston USA today)
I looked at the theory behind FSK mode and got lost! all I know it works))

Noise? my experience is minimal, ALA 1530S+ Loop keeps it down living in a town and I have had stupid things like fridge kicking in, central heating motor and in my kitchen mini 12Volt light strips converted from 240VAC with in built transformer ....can give grief;)

Yes thanks about Hawthorn Tree.....should of read the initial message;))

Best regards..
Steve

Hi Dirk

Yes, I have now added CURACAO as a geographical keyword.

In fact, I have never seen this name used in a message from any other

station.

I wish I had not said how good T/A had been recently ! Last night, there

was nothing from over the pond !

Regards

Bob

Hello Bob,

Solar flux has risen from 125 earlier this week to 165.
The Kiel A-index is 19.

This is not good for NAVTEX on 518 khz.
From my QTH, the flux should be below 120 and the A-index below 10 before things are getting interesting! Lower is better.

Best regards,
Roelof Bakker

Hi all,

> Anyway, this is cheaper than the Euro 30 fee for the registered version of VAC.

Maybe not.
The registered version of VAC supports many (256) virtual cables.
Not sure how cheap these USB sound dongles are but if you need more then one VAC's you might be better off with VAC instead of several dongles. Also the dongle needs an USB port and you even might need an USB Hub once you run out of them.

Just a thought :-)

Cheers,
Dick

Hello Dick,

The cost of 1 dongle is 1 Euro, shipping included.
And there are 14 USB ports available on this PC.

73,
Roelof Bakker

Back to 518kHz.
Reception seemed much better. Of course, the question now is whether it is because of something I did, or because of natural forces?

That's what I thought, too ;-)

Anyway, here is a sampling of the better parts of the log

```

9399. A question about timing

Yahoo group: navtexdx (2015)
Date: 2015-01-30 14:59:20 UTC
From: david
Topic: 9399 Message: 9399

Hi Everybody

As part of my quest to improve reception, I went back to read a lot of the technical details surrounding Navtex. There isn't a lot of purely technical stuff -- most of the published documentation is about the management of the service as a whole, under the control of the International Maritime Organisation. One of the things that exercises the IMO greatly, is timing. There are several places in their formal documentation where they make a big deal about the need to transmit in the proper time slot. If a transmitter broadcasts outside its allocated time, it might obliterate a message from a station that is supposed to be in that slot. Out Of Timeslot transmission is strongly frowned upon, unless dealing with emergencies.

Which brings me to ask why Malin Head ($01Q) always seems to start its transmissions 60 - 90 seconds early? It isn't to fit in an extra long bulletin, because they always seem to finish early, too.
Are there other stations that Listmembers have monitored that regularly do the same thing?

Best Wishes
David GM8XBZ

Hallo Roelof,

In that case WHOW and I can see why a dongle would be cheaper.
Will have to have a look at those :-)

73,
Dick (PA2015)

Hello David,

>>> Which brings me to ask why Malin Head ($01Q) always seems to start its transmissions 60 - 90 seconds early? <<<

I believe that their installation has a feature that will not alow them to transmit when the channel is occupied by an other station.
NAVTEX from Split in the same time slot is often too strong for comfort, so the only way to start the Malin Head NAVTEX transmission to start a bit early.....

73,
Roelof Bakker

Roelof
Thanks. I didn't know that IMO gave dispensations to avoid swamping. It might partly explain why I haven't logged Split, though. Malin Head is less than 150km over sea from here, compared with more than 2200km over a lot of land to Split. I might try setting the ALA1530 to get as much of a null as I can on Malin. It is the only steerable antenna I have, although the nulls are not deep.

Regards
David

Hello David,

My guess is that there is no IMO involvement at all as it seems rather a matter of using common sense!

73,
Roelof

Hello David

Tend to pick up Split here on 22.40pm slot no problem even though it shares spot with Malin. ALA 1530 direction SE, distance from here to Malin 555km.

It really is pot luck! Malin may do very brief transmission followed by Split.
I find this time of day Nav area 3 is good!

For me at these frequencies I find the ALA1530S has very directive properties...
DX Navtex for me is a bit like fishing.....you never what you may get.....or not;)

Regards..
Steve

Hello all,

Not a shred of T/A signals, but otherwise decent propagation.

David, regarding the Malin Head versus Split issue, I am somewhat in the middle and at night
Split always wins. However at this this time of the year, I have excellent dautime reception of
EJM.

From: Dirk Claessens
Topic: 9399 Message: 9408

David,

Timing is far from perfect. From the top of my head:
- Few Navtex stations are synced to a time server.
- Generally, starting times may be several minutes early or late.
- Cullercoats' start time is spot on, but it will overrun its time slot fo 2 or more minutes every other day. - The 3 Turkish stations use adjacent time slots. I have seen them wiping each other out :0)- "Cyprus Turkish Radio" is an illegal station operated by Turkey, and pops up in the logs now and then, competing with the official 5BA Cyprus Radio.
- USCG stations have accurate starting times, but can ramble on for 30 minutes and more and interfere with each other.
But... all the above is excellent for DXers! A local station starting 2 minutes late is just what you need to catch the DX...
Regards - Dirk

Subject: [navtexdx] A question about timing

Hi Everybody

As part of my quest to improve reception, I went back to read a lot of the technical details surrounding Navtex. There isn't a lot of purely technical stuff -- most of the published documentation is about the management of the service as a whole, under the control of the International Maritime Organisation. One of the things that exercises the IMO greatly, is timing. There are several places in their formal documentation where they make a big deal about the need to transmit in the proper time slot. If a transmitter broadcasts outside its allocated time, it might obliterate a message from a station that is supposed to be in that slot. Out Of Timeslot transmission is strongly frowned upon, unless dealing with emergencies.

Which brings me to ask why Malin Head ($01Q) always seems to start its transmissions 60 - 90 seconds early? It isn't to fit in an extra long bulletin, because they always seem to finish early, too.
Are there other stations that Listmembers have monitored that regularly do the same thing?

Best Wishes
David GM8XBZ

You may find latency is lower with a dongle than with VAC, although VB-Cable (donationware) is better than VAC but not quite as configurable. To further confuse matters some newer versions of VAC seemed to give some users problems, personally I have not moved from version 4.12. I started with 4.09 and skipped the next versions until 4.12 . I have found latency issues with 4.14.

My transceivers work well with VAC and VB-Cable but are not liked by my Perseus or Afedri. I find the underlying PC hardware is a factor as well, I can use both VAC / VB-Cable together with the Perseus / Afedri
on laptops but not on my desktops.

Sometimes I think I am playing "whack a mole "

Regards
Stephen

Dirk,

Thanks for setting out what was on your head:-) It is helpful to have this information collected together. You write with a lot of experience, and it is generous of you to share it.
The 'official rules' come from the IMO. They are a body with international powers. In the UK they even get Diplomatic number-plates for their vehicles. The most recent version of their Navtex manual that I can find is from 2011. Like the previous versions, it is pretty heavy-handed about stations not transmitting over the top of others in the same area. I might expect a cavalier attitude from a belligerent administration, but the criticism seems to be addressable to nearly everybody.

Of course, as a DX-er I can benefit from this. [As a sailor, I would be less pleased.] I just wish Malin Head would be late occasionally, instead of always early. Then I might get a chance at Split.
Do you really think it could be that their clock is more than a minute out? No.. .. .. they're pushing their luck, aren't they?

I don't want to bog the list down in this topic. But I will study closely for a few days and see if there is any pattern. Looks like I shall have to follow Roelof's example and run a parallel instance of YaND. Interestingly, IMO has a strong administrative authority on all aspects of the 518kHz services, but only over the time-slots for 490kHz and 4209.5kHz. It seems the rest of the system is totally under local control.

Thanks to everyone for their input. Keep it coming -- I have a lot to learn.

Best Wishes
David GM8XBZ

Hi David

One of the best things about this group is its diversity.....

Some may be into Logs format, some into the technical aspect of Navtex and some like me hunting out the DX side which can be a case of luck! Right place-right time;)

Propagation is I find a key to success or not with receiver location taking the point that we do not live in a marine environment.
And base line is without over stating the obvious, Navtex is a mariners tool and not designed for DX interest....we are a spin-off;)

Timing wise I find some stations pop up out of the blue that were not on schedule with warnings etc....which can be for DX helpful/not helpful;)

I find the Navtex Schedule a good tool as 'possibilities' and for me its never a given for receiving....and the unexpected wildcard DX is for me very addictive....

Deciphering incomplete code to verify the station location can be quite an art, almost forensic! Missing headers etc and have used Google Translator at times to assist in location and message content.

All adds up to fascinating mode!

Good luck with DX!

regards..
Steve

Hello David,

What I meant to say is that you have regulations and the real world.
If technical reasons out of your control don't let you start transmissions exactly on schedule
and the only option you have is to transmit (important) messages one minute early, the single
sensible decision is to go ahead and do it.

Again looking at the real world, the NAVTEX area 1 time slot preceding EJM is allocated to Den Helder and this station never uses the full time of their time slot. Should they do this, no
harm is done as EJM can't start on an occupied channel, due to the reason mentioned above. The same applies to Haifa Radio for NAVTEX area 3.

Urgent messages are allowed to transmit at all times, albeit the channel must be clear.
I guess this is the reason that NAVTEX is still a manned service, so the operator can check if
the channnel is free.

Reception of NAVTEX by mariners is most likely restricted to one NAVTEX area and/or a particular station of interest by a receiver setting, rather than using exact timing.
The letter should reject out of the dedicated time slot transmissions, which is not desirable.

Best regards,
Roelof Bakker, PA0RDT

Hi All,

Recently, I have been trying to extend my Navtex log, and especially trying to receive $03Q Split.
This morning, I found a logging of that very station. But it was only a partial decode, and the software had made some crucial substitutions.
Is YaND teasing me?
Here is what was in the log, clearly identified as Split in the Log. Does anyone have a clear copy of this message?

20150131 0241 518 $03Q 9AS Split,HRV 2077

Hello David,

Yes, I have received it on an experimental mini-whip using 7.5V @ 8mA.
Why 7.5 V? This power supply also feeds my Afedri SDR and the Afedi needs 7.5 V.

Hi Roelof,

1. I'm impressed. Only 60mW to power the antenna. That is well within the scope of battery power. Less than one tenth of my 12v unit.

2. On the message, I'm still confused. Who is claiming to have broadcast it?

Best Wishes
David

Hello David,

Yes, I have received it on an experimental mini-whip using 7.5V @ 8mA.
Why 7.5 V? This power supply also feeds my Afedri SDR and the Afedi needs 7.5 V.

Hello David,
For Yand, the Split/Mondolfo clash isn't quite simple actually. :0)
The station identification process attempts to identify a station with 2 methods.
1. The list of globally unique keywords is searched for all stations. If a keyword is found in the message, the station "owning" that keyword is selected as ID. Note that the search stops on the FIRST match found.

2. If a unique keyword was not found AND a valid ZCZC [A..X] sequence is present in the message,then the geographic keyword lists of all stations having the identifier as seen in the message are examined. Matching keywords for each station are counted, the highest count wins.3. if nothing found => UNID
The situation where a station (i.c. Mondolfo) explicitly uses the name AND the ID-letter (!) of another station (SplitRadio) is very rare and will foil Yand's ID-ing system. It is just bad luck that SPLITRADIO was found as the first match instead of MONDOLFO RADIO.
Nothing is perfect...

Regards - Dirk

Hi all,
A very short fragment from St. John's could be logged.
From NOAA:the number of sunspots observed in the previous 24 hour period
The NOAA Sunspot number for 30-Jan-2015 was:      193
Most recent five days (oldest first):     65  110  119  140  181

This doesn't bode well...

Regards - Dirk

Hi All,

Conditions seem to be improving, and I hope to move the cut-off point further outwards as the index becomes more favourable.
Of course, even local 'power houses' need reporting occasionally, if only to reassure those for whom they are 'DX' that all is well. If there are no objections, I would like to include them around once a month. Advice is always welcome.

From: david
Topic: 9413 Message: 9424

Dirk,

Again, thank you for the interesting explanations.
YaND generally does an excellent job, but there is no substitute for checking the ID that it suggests. I have to admit, that one of the pleasures of receiving Navtex is the detective work that is required to try to work out which stations some of the 'UNID' actually are. YaND does a thorough job, but sometimes the eye can spot a pattern that leaves no doubt. As you point out, though, it is foolish to blindly accept what the computer suggests;-)
Better still is to get perfect decodes more often. I'm working at it.

Best Wishes
David GM8XBZ

Subject: Re: [navtexdx] Help to identify a decode

Hello David,

For Yand, the Split/Mondolfo clash isn't quite simple actually. :0)

The station identification process attempts to identify a station with 2 methods.

1. The list of globally unique keywords is searched for all stations. If a keyword is found in the message, the station "owning" that keyword is selected as ID. Note that the search stops on the FIRST match found.

2. If a unique keyword was not found AND a valid ZCZC [A..X] sequence is present in the message,
then the geographic keyword lists of all stations having the identifier as seen in the message are examined. Matching keywords for each station are counted, the highest count wins.
3. if nothing found => UNID

The situation where a station (i.c. Mondolfo) explicitly uses the name AND the ID-letter (!) of another station (SplitRadio) is very rare and will foil Yand's ID-ing system. It is just bad luck that SPLITRADIO was found as the first match instead of MONDOLFO RADIO.

Nothing is perfect...

Regards - Dirk

Hi Steve,

It wasn't a major update, David had spotted that I made a mistake in one of the country codes, and I had made a correction to it. I also updated Tobias' NAVTEXview program as well at the same time, as that also had the same mistake in it.

I'm starting to get daft in my old age I think, but I'll just blame it on a 'Senior moment' this time! :-D

Alan.

9429. Log 2 KML converter

Yahoo group: navtexdx (2015)

From: pe1kzu@...
Topic: 9429 Message: 9429

Hi Dirk,

Thanks for giving me access to this group.
I found a lot of interesting information while browsing the navtexdx directories and messages.

Until about a month ago I used only fldigi for receiving navtex signals but YaND adds a lot of options.
There are two options however which are in fldigi but I can not find in YaND;
- waterfall display
- export logfile to kml format.

I have not seen anyone asking these questions before. Is there a tool or plugin that can convert the logfiles/reports to KML format?
Would a WF display an option in a future release?

Best regards,
Bert

Hi Alan,

Yes can identify with senior moments, still damn good database though;)
Thanks for updates...

Steve

Hello Bert,
Welcome to the group!Older versions of Yand had a waterfall display, and some even had a 3D waterfall.The waterfall was shown right under the spectrum window, and the message text window was on a separate tab page. Most users found it better to have the message text under the spectrum on the main tab, so the waterfall had to go.

Yand can show a geographical representation of logged stations on DX-Atlas, see the "reception statistics" tab. In the past I had a look at the KML format, and found it to be overly complicated for what it is.

Regards - Dirk

There are two options however which are in fldigi but I can not find in YaND;- waterfall display- export logfile to kml format.

Hi Roelof,
The Samsun you logged is Cyprus Turkish Radio in disguise, using the E-identifier of Samsun (again).For Yand, E + "TURK" => Samsun.
In the past we had no clue where the mystery transmissions were originating from.I just accidentally found a recent message from 5BA Cyprus complaining about it, and they state that Antalya radio is the source!

All,
I picked up the link below in another group.US Army manuals for anything you can think of: guns, cannons, tanks, but also radio's, transceivers, antenna's etc..starting 1936.

Regards - Dirk

9436. Re: [navtexdx] Log 2 KML converter

Yahoo group: navtexdx (2015)
Date: 2015-02-02 06:08:35 UTC
From: pe1kzu@...
Topic: 9429 Message: 9436
Attachments: 1 described; binary payloads are missing from this source WARC

Hi Dirk,

Thanks for explaining.
Would it be possible to create a toggle switch for Spectrum/WF display?

It is a petty that KML is a too complicated format for use with YaND.
With fldigi I use it for message display in Google Earth. See attached picture.

Have a nice day.

Kind regards,
Bert

From: stevesden1@...
Topic: 9033 Message: 9437

Hi Dirk,

Found this clip, may or not be relevant..

Turkey invades Cyprus by Navtex - 20 October 2014
Navtex may not be the most obvious choice for declaring to the world that you are effectively annexing part of a country's waters, but this is the medium Turkey has chosen to claim part of Cyprus' Exclusive Economic Zone.

On 17th October 2014, Turkey's NAVTEX transmissions included a statement that part of Cyprus' EEZ was "reserved" by Turkey - an area where ENI-KIGAS have been carrying out exploratory drilling for offshore gas. Turkey is intending to move its own research vessel into the area, to carry out seismic surveys from 20th October to 30th December.

Regards..

Steve

9438. NAVDAT 500kHz

Yahoo group: navtexdx (2015)
Date: 2015-02-02 10:06:30 UTC
From: stevesden1@...
Topic: 9438 Message: 9438

Hi all..

Been reading about proposed next generation of Navtex as Navdat 500khz.

Not sure if implemented yet.....clip here...

As part of the overall review and planned modernisation of the GMDSS system, a new service is being considered, NAVDAT (NAVigational DATa). This uses the 500kHz frequency, previously used for distress messages, and all the available bandwidth between the 490 and 518kHz NAVTEX frequencies.

The achievable data throughput (as opposed to the theoretical maximum) would be 12 - 18kbps (compared to 0.1kbps for NAVTEX), and with the same range as NAVTEX. Transmissions may be made on the same time slot basis as NAVTEX, or all stations may be synchronised to send the same data at once. With the higher data rate, it is proposed that stations have time slots of 3 minutes each, with a repeat cycle of 30 or 60 minutes.

By linking with a GPS and the vessel's MMSI number, it is possible to send messages to all vessels in a specific area, or to individual vessels, as well as to all vessels within range.

In addition to the existing NAVTEX information, it will be possible to send digital forecast data (e.g. GRIB data), detailed VTS information, chart corrections (paper or digital) and other enhanced services.

The receiver would use a small antenna (similar in size to the current NAVTEX antenna), and power consumption would be about 10W.

Seems some Navtex receivers are now sold as Navdat Ready.

Any thoughts?

Regards

Steve

Hello Steve and the group.
OK first question is where did you find the quote?... there has not been much in the news for quite some time.. i believe the system used some fancy exotic 64 QAM or some such fancy modulation scheme.. wider of course than NAVTEX which to my mind has been obsolete for quite some time.. the very limited character set is one of the issues.. the much higher speed would way reduce time to send messages and allow more time slots and /or broadcasts more often.. i would think it might not be as fast as say DSL at home.. but that it should support graphics i.e. maps....in color.. and be more like a computer display and less like a boat anchor teletype machine with limited character set.. also it would be a lot easier to support foreign languages with characters not on an English keyboard.. but are already on the "character map"

on the transmitting side.. 10 KHz Bandwidth might cause some antenna tuning issues at the low frequency... much less so on HF... i believe it was a French outfit doing the developing and some test was run with a ferry boat in Europe quite some time ago.. but i have not heard any updates..
the SITOR/AMTOR mode is pretty obsolete... the only ones using it are NAVTEX and ARRL W1AW bulletins. and even those are alternated with other modes.. i heard recently that hams have 60 different digital modes to choose from.. these days decoding should be implemented with software. any receiver that works on 500 KHz should work.. i think a BFO will still be necessary
using SSB is way more efficient than AM though "Real" boats would have a purpose built receiver.. just like AIS.

i am skeptical of the statement that navdat will use all of the bandwidth from 490 to 518... i dont buy that.. that is 28 KHz... i can see maybe plus and minus 5 KHz from Nominal channel.. or SSB. more efficient from zero to maybe 6 KHz USB... NAVTEX sort of already is SSB.. two tones are applied to an SSB transmitter . with 170 Hz "shift" the new modulation might be more like 16 tones

Does anyone have that paper about the system ? i remember reading it quite some time ago...

Hi Marc,

The info came from PC Navtex home page, PC Navtex as you may well know does not run on a PC on its own but only with designated Navtex receiver.

Go to PC Navtex home page, click About Navtex, drop down menu to NAVDAT.

From what I can gather PC Navtex is a standard Navtex program for PC run Navtex receivers, USB or serial port, which is included on CD with Navtex receiver.

www.pcnavtex.com/

French page

http://www.invest-in-bretagne.org/maritime-communication-innovation.html

If you Google NAVDAT 500KHZ a lot of stuff comes up. Lot of info dated 2012

Regards

Steve

  Hi Dirk,
Found this clip, may or not be relevant..
Turkey invades Cyprus by Navtex - 20 October 2014Navtex may not be the most obvious choice for declaring to the world that you are effectively annexing part of a country's waters, but this is the medium Turkey has chosen to claim part of Cyprus' Exclusive Economic Zone. On 17th October 2014, Turkey's NAVTEX transmissions included a statement that part of Cyprus' EEZ was "reserved" by Turkey - an area where ENI-KIGAS have been carrying out exploratory drilling for offshore gas. Turkey is intending to move its own research vessel into the area, to carry out seismic surveys from 20th October to 30th December.
Regards..
Steve

Hi Steve,
I have studied the NAVDAT specs a few years ago.Experiments were done by the French company Kendat, where an experimental transmitter in Brest was tested, and signals picked up by several ferry boats. IIRC, that was 2012. The system was also presented to the IHO Navtex board in that year.Adoption of new worldwide standards is a very slow process...
Regards - Dirk

Been reading about proposed next generation of Navtex as Navdat 500khz.Not sure if implemented yet.....clip here...

Hi Dirk,

Thanks for info;) The 500kHz band was I think used by amateur radio and read they were stopping use on this frequency to make way for Navdat.

As mentioned before, Navtex receivers are now sold 'Navdat Ready' but as you rightly say it takes LONG time to adopt new world standards.....(yawn) ;)

Interesting Marconi used 500kHz frequency for first trans-Atlantic transmission.....and also 500kHz was used by Titanic distress call....

Regards..
Steve

9454. 500 KHz comments

Yahoo group: navtexdx (2015)
Date: 2015-02-03 01:15:24 UTC
From: Marc Goldman
Topic: 9454 Message: 9454

Gentleman:
as to 500 KHz.. the hams wanted 500 KHz. but did not get it at the last WARC convention.. A long time ago I had a talk with Rod Stafford W6ROD... (Judge and Lawyer and ham) and past ARRL president and also a serious photographer... (he was haveing an exhibition selling prints at an art Gallery in Moss Landing.. just up the road several miles from me) (i also do photography..)

well he was aware that the actual number of users for LF was pretty small but ya still have to go through international treaties and all manner of stuff.. well after the haggling the hams got 472 to 479 KHz. A number of other countries have implemented it.. with some small print foot notes... but NOT the USA... what has happend is the "hams" all got an experimental license so they are useing WD2XSH- 1 to around 20 see :
http://www.500kc.com/ during the special night of nights event and some other event i have heard a couple of these guys.. they are all hams and happy to get reception reports..

the KPH/KSM/K6KPH folks at the old Coastal CW station in Bolinas (transmitters) and Pt Reyes (receivers and operations) uses some of these frequencies.. i have heard them on 426 KHz on Saturdays... i believe that last big storm damaged a lot of antennas. and boy o boy do they have antennas!! see http://www.radiomarine.org/
these folks have recently been authorized to use 512 KHz.. likely a transmitter they have will need to be modified or set up on that frequency... 12 KHz in the basement band is a long way...
so transmitting antennas for 500 KHz for the land stations will be "an issue" i think capacity hats will help... a larger "diameter" tower will help too.. I think the ITU is well aware of the historic significance of 500 KHz.. all the more reason the hams did not get it.. but Marine safety will

time to refresh my memory on what is happening.. at glacial speed.. with NAVDAT..

being able to deal with graphics for notices to Mariners is a really good idea...

Hi Marc,

Interesting;) for time line wise could only find the following....

ITU-R M.2010
Characteristics of a digital system, named Navigational Data for broadcasting maritime safety and security related information from shore-to-ship in the 500 kHz band
This technical characteristic may be used for e-Navigation for digital broadcasting maritime safety and security related information from shore to ship on 495-505 kHz with high data rate.
WRC-12 allocated 495-505 kHz to the MMS exclusively for the high-speed digital broadcasting, effective on 1 January 2013.
And from Navtex Database

500kHz FRC FRA BREST EXPERIMENTAL

I guess the addition of Navdat will take some time.

HF Fax as you know, still used and is probably around 91 years old and still complements navigation aids...

Photograph of President Calvin Coolidge http://en.wikipedia.org/wiki/Calvin_Coolidge sent from New York to London on November 29, 1924 became the first photo picture reproduced by transoceanic radio facsimile.
Commercial use began two years later. .

Again today got real nice HF Fax Boston USA from here in UK

As far as change goes some would say if it aint broke don't fix it and I guess Navdat will happen over quite some time;)
Lets hope not as long as HF Fax;)

Regards..
Steve

From: stevesden1@...
Topic: 9458 Message: 9459

Nice catch Dirk!

Ostend on same time slot too.....nice one;)

Been trying for ages on 518kHz 23.40 slot to get Nuuk GRL but Lagarde FRA always cuts in.....did get Nuuk once last year, sheer luck;)

regards..
Steve

9461. Re: Navtex log from Antwerp,BEL 20150203

Yahoo group: navtexdx (2015)
Date: 2015-02-03 23:47:42 UTC
From: stevesden1@...
Topic: 9458 Message: 9461

Hi Dirk,

Should of added this to previous message;)

Was wondering if your success with Quseir. was due, checking your log, Quseir kicked in early at 23.28pm, ended 23.30:34 and Quseir was due at 23.30

Ostend too has 23.30 slot....looks like Quseir beat Ostend to the post;) ,

Have had this situation before with DX station kicking in early and taking out local Nav area station for transmission slot...
Anyone else had this?

This goes back to what David was saying about precise timing...and when its not can be good for DX!.

Regards

Steve

9464. Navtex log from WhitleyBay, ENG

Yahoo group: navtexdx (2015)
Date: 2015-02-04 15:13:52 UTC
From: Mike Thayne
Topic: 9464 Message: 9464

Hello All,
Just an occasional report until conditions improve, a good variety last night but still no T/A signals here, yet.....
9AS Split Radio messages being sent from IQM Moldolfo Radio not included in log, it's too complicated!

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: Icom IC735 in CW mode
Decoder: YaND 6_3D.
Computer: Dual CPU 2.2Ghz, RAM 2.00GB
with external soundcard.
Antenna: Wellbrook ALA100M with 6m circ wire
loop.

Hi Steven,
Yes, Quseir was a few minutes early.I guess both Ostend transmitters are synchronized to a time server.The carrier is switched on exactly at H+15 seconds each and every time.
Novorossyisk in the A-slot also starts a few minutes early most of the time, and Corsen a few minutes late. Not that I mind :0)
Regards - Dirk

Subject: [navtexdx] Re: Navtex log from Antwerp,BEL 20150203

Hi Dirk,
Should of added this to previous message;)
Was wondering if your success with Quseir. was due, checking your log, Quseir kicked in early at 23.28pm, ended 23.30:34 and Quseir was due at 23.30
Ostend too has 23.30 slot....looks like Quseir beat Ostend to the post;) ,
Have had this situation before with DX station kicking in early and taking out local Nav area station for transmission slot...Anyone else had this?
This goes back to what David was saying about precise timing...and when its not can be good for DX!.
Regards
Steve

Hi Dirk,

Thanks;) Yes good news when Nav Area 1- 2 station is late....

Waiting for warmer weather here so can get ALA Loop outside....will make huge difference;)

Regards..

Steve

Hi all,
Not too bad...Baku was a surprise. Just a very short fragment - I almost deleted it - with the unique words BAKU NATIONAL CENTER. That's 3654 km and a path 100% over land.
Regards - Dirk

9474. Navtex log from Antwerp,BEL 20150205

Yahoo group: navtexdx (2015)
Date: 2015-02-05 20:00:29 UTC
From: Dirk Claessens
Topic: 9474 Message: 9474

Hi all,
Seeing Odessa in the log was a long time ago. Not great DX, but rare.
I noticed that Yand is still showing Odessa in its old (wrong) P time slot (02:30-06:30-10:30, etc..)It now seems to transmit in the correct time slot corresponding to a C-identifier: 00:20

Regards - Dirk

Hello Dirk,

I found Odessa as well in the same time slot.

Today I received my sound dongles from the Far East.
I have modified two of them and these are now feeding two instances of YaND.

No T/A last night, but otherwise propagation was not too bad.

Hello all,

NAVTEX 490 kHz log over 1500 km:

```

9477. Report from VE3EAR

Yahoo group: navtexdx (2015)
Date: 2015-02-06 14:26:21 UTC
From: John Bruce McCreath
Topic: 6963 Message: 9477

For something different, I thought I'd share my log of "regulars" that I get every night. There was no DX in the log, with the west coast stations being no-shows, along with Greenland and Iceland, that I occasionally get.

Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter
Antenna : Delta loop 33M a side, apex up
Decoder : YaND V 6.3
Exclude : Less than 100 km
Best DX : $15K CBP, Puerto Montt, Chile
Web Site : www.hurontel.on.ca/~weazle

```

Shack temperature has finally risen above 2degrees [I haven't got round to installing any heating, yet], so I ventured into it for long enough to extract the logs for the past few days. I submit them more to encourage others to do so than for any benefit to those with much better set-ups than I have. I'll keep trying, and firmly expect to do better -- eventually.

9480. YaND user questions

Yahoo group: navtexdx (2015)
Date: 2015-02-06 15:44:44 UTC
From: david
Topic: 9480 Message: 9480

Hello all,

I used YaND a long time ago, but only returned to regular use recently. I've read the manual -- I really like the manual; I wish other software was this thorough -- but I have a couple of questions that one or more of the experts might be able to help me with.

When the 'Spectrum' screen gives a centre frequency, what is it actually measuring? I ask this because different stations generate different figures, but they disagree with the results I can see in Argo and in Spectran. And it isn't a constant difference, so I don't think we are looking at soundcard variations. Anyway, I'm running the softwares simultaneously on the same card, so you would expect any disagreements between the programmes to be the same. Am I seeing a difference in the signal format from different transmitters, for example.

On the 'Log' screen, is there a way to turn off the flyout? It always seems to sit itself over the record I'm trying to edit. Not a showstopper, but a lot of software lets you suppress tooltips. Is that in YaND, too?

Still in the log screen, is there a way of delaying the update while I am correcting an entry? Readers of my logs will know that I have a marginal set-up, and I spend quite a lot of time going through messages that YaND wasn't happy with, but which the operator can confidently identify. As the system is still receiving current signals whilst I am reading old logs, the log table will refresh in the middle of an edit and I lose my place. Is there a cure for this? It is the same when I am selecting logs for a report.

Which leads to my final question, for now. Is there a way of getting feedback when I select a log for inclusion in a report by shift-clicking the left-most column? Sometimes, I get it wrong and a log doesn't get to the report. Sometimes I think I got it wrong, and click more than once to find multiples in the report. Is there something that confirms selection, or am I just not being careful enough?

I have to stress that I'm not complaining. There is nothing to compare with YaND's functionality for users like us. But I am keen to improve my understanding of a programme I respect and admire.
And I wish there were a programme in the Ya family that did DGPS ;-) No pressure!

Best Wishes
David GM8XBZ

9481. Re: [navtexdx] YaND user questions

Hi David,
Regarding the spectrum centre frequency (the red vertical line), there are 2 situations:1. Autotuning is offNo measurement is involved, the line will just sit there, indicating the central audio frequency.The user can freely select any frequency by clicking in the spectrum, or by dragging the line.
2. Autotuning is on (dark blue 500Hz wide tuning region visible)
With no signal present, the red line will jump randomly within the blue region, Yand is trying to find a signal. When a signal is present, Yand will track the signal peaks and lock on the signal. Autotuning is meant for possibly unstable or drifting receivers. In the past I have found that European Navtex transmitters are all very stable. The spread lies within ~20..30Hz of 518.000KHz.This is inconsequential for Yand, even with autotuning off.

I'm a bit puzzled by the discrepancies you mention between Yand/Argo/Spectran.On the screen shot below you can observe that all 3 of them show the same central frequency of 1700 Hz. (Input was from a Perseus set to 1700Hz RTTY note pitch and 400Hz IF-filter) Maybe we have a misunderstanding here?

The tooltip on the log screen was introduced many versions ago as a hint to the many users who apparently kept forgetting how the %%^&$$$#@ to add a log entry to the report screen.The tooltip popup should however not get in the way when editing records. Screenshot below from a WIN7/64 system:

As you can see, I clicked on the log record indicated by the black arrow on the left.Editing was possible without problems. The popup may show up above or under the line of interest, depending on the position in the window (the Windows OS decides this, not Yand)What version of Windows are you using?

When you edit on a live system with messages coming in, the position of the currently edited record may jump slightly, but it will NOT loose focus, i.e. the black arrow should stay on the record currently being edited. Typically the position will shift to the middle position of the log window. This is behaviour of the database engine and can only be changed with a lot of hanky-panky which may introduce all kinds of other side-effects. Regarding the shift-click feedback, the best tip I can give is to constantly hold down the Shift button, and then clicking the records of interest. You can even scroll with the wheelmouse while holding down Shift. There is no need to do shiftdown-click-shiftup for each record.
Hope this clears things up. If not, let me know.
Best regards - Dirk

9484. RE: [navtexdx] YaND user questions -- mainly for Dirk

Yahoo group: navtexdx (2015)
Date: 2015-02-07 16:07:13 UTC
From: david
Topic: 9480 Message: 9484
Attachments: 2 described; binary payloads are missing from this source WARC

Hi Dirk,

Thank you for the screengrabs and for the detailed explanations. I don't want to belabour the List with these questions, but I'll respond to the thread here and then we can move it offline if you think there is nothing for others to gain from it.

For YaND, I'm using Win7 on a Dell pentium4 at 3.2GHz with 2Mb RAM and an M-Audio Delta44 sound card. Not a top-flight machine, but it should be adequate. Only one instance of YaND, at the moment. I have Spectran running to let me see the shape of the signal. YaND has been used to 'calibrate' the soundcard.
Autotuning is ON.

I waited until I had a strong local signal. Portpatrick sends a carrier before its first transmission. Then some sync tones, followed by the message.
scr2.jpg shows what this looks like in spectran. When I place the cursor on the carrier, Spectran says 1362Hz. If I read the values at the edges of the Mark and Space tones, it says 1265.1Hz and 1458.9Hz.
At the same time, YaND gives me 1372Hz, as in scr1.jpg
The display is stable, but note where the filter lines are compared with the indicated signal. Trying to understand what was happening prompted me to ask just what YaND was measuring. I had hoped it was measuring the peaks and picking the centre as the declared 'carrier' frequency. But now I look at my display closely, I seem to have an offset between the calculated and the indicated figures. It doesn't affect the usability of the software; I was just curious. [It is all because I would like to fingerprint the different transmitters. Mark and Space tones offset from the nominal freq by different amounts are a useful identifying feature.]

The other points might be relevant to this.
I clearly have a marginal installation. When I see your log screen, it is so different to mine, because I might well have 50% of the entries in mine as UNID. So, I look at several of them at once to try to pick up patterns. That means that the tooltip is probably sat over one of my queries. Some software lets you suppress tooltips, and I wondered if YaND did, too. I understand why it is there. I will work on reducing the number of UNID's.
I also understand the situation with the live database updating while I look at it. I think it might need more than 'Hanky Panky' to get round it. I hadn't realised that the focus was retained. That makes me more confident about using it.

Thanks for the tip on selecting records. That helps. I'd still like to see some feedback to selection in a future version. A change of colour, perhaps?

Or a 'Logged' column? Maybe, with more practice, I won't need it ;-)

Just one more point that might be relevant. My 'Input Level' is around 15%. That is as hard as the receiver or the DSP can hit it. I held off using an audio amplifier because I feared introducing distortion. The 'SNR' figure is high, but does the software need a stronger signal.

Thanks for all your help.

Best Wishes
David GM8XBZ

Hello again David,
That doesn't look like a strong signal from Portpatrick on Yand's spectrum, but it does on Spectran, this is odd! Below is the live signal of Corsen at 770 km from my QTH, a medium-strength signal. One can clearly see 2 distinct peaks.
On your screenshot, Yand is clearly struggling to find the peaks, and the signal looks like a T/A DX signal to me.

This may partly explain the Spectran/Yand difference. Another point is that Yand's spectral resolution is only 8 Hz. Spectran is a precise measurement tool, Yand is definitely not. The spectrum's only purpose is to tune Yand's bandfilters to the signal peaks; 8 Hz is ample accuracy for that.
Are you very sure that Spectran and Yand are using the same input signal?I have a feeling something is wrong here, this should be investigated first.(note that the 15% input level is OK. The question is what is the signal)
Kind regards - Dirk

picking the centre as the declared 'carrier' frequency. But now I look at my display closely, I seem to have an offset between the calculated and the indicated figures. It doesn't affect the usability of the software; I was just curious. [It is all because I would like to fingerprint the different transmitters. Mark and Space tones offset from the nominal freq by different amounts are a useful identifying feature.]

The other points might be relevant to this.
I clearly have a marginal installation. When I see your log screen, it is so different to mine, because I might well have 50% of the entries in mine as UNID. So, I look at several of them at once to try to pick up patterns. That means that the tooltip is probably sat over one of my queries. Some software lets you suppress tooltips, and I wondered if YaND did, too. I understand why it is there. I will work on reducing the number of UNID's.
I also understand the situation with the live database updating while I look at it. I think it might need more than 'Hanky Panky' to get round it. I hadn't realised that the focus was retained. That makes me more confident about using it.

Thanks for the tip on selecting records. That helps. I'd still like to see some feedback to selection in a future version. A change of colour, perhaps? Or a 'Logged' column? Maybe, with more practice, I won't need it ;-)

Just one more point that might be relevant. My 'Input Level' is around 15%. That is as hard as the receiver or the DSP can hit it. I held off using an audio amplifier because I feared introducing distortion. The 'SNR' figure is high, but does the software need a stronger signal.

Thanks for all your help.

Best Wishes
David GM8XBZ

Best regards - Dirk

9488. Navtex log from Antwerp,BEL 20150208

Yahoo group: navtexdx (2015)
Date: 2015-02-08 20:42:01 UTC
From: Dirk Claessens
Topic: 9488 Message: 9488

```
Hi all,
"normal" conditions ... log over 1500 km.
Note the HF-schedule for Ismailia, maybe worth listening for?

Regards - Dirk

Hi all,
Interesting radio effects were noticed on LF during solar eclipses in the past.
Interesting article here: Solar eclipse effect on the propagation of LF radio signals

| |
| | | | | | | |
| Solar eclipse effect on the propagation of LF radio sign...Solar eclipse effect on the propagation of LF radio signals. Written by M. Sanders, PA3BSH. Revision 1a, may 1st. 2001. (reference update on URL) INDEX: Summary. ... |

20 March 2015 – Total Solar Eclipse
It's a Total Solar Eclipse in Svalbard (Norway) and the Faroe Islands, and a Partial Solar Eclipse in Europe, northern and eastern Asia and northern and western Africa The eclipse starts at 7:41am UTC. The maximum point (totality) begins at 09:45am UTC and will last for 2 minutes and 47 seconds.
Detailed info here:

9493. Svalbard???

Yahoo group: navtexdx (2015)
Date: 2015-02-10 15:01:03 UTC
From: Dirk Claessens
Topic: 9493 Message: 9493

Hello all,
Last night I received 2 identical Norwegian weather forecasts.This is not uncommon at all, but the first (headerless) fragment was received in Svalbard's 00:00 time slot. The second fragment (mutilated header) was received in Vardo's 00:20 time slot.Inbetween both fragments, only complete garbage was decoded, presumably Bodo and Alger were interfering with each other.
At 3000 km up north, Svalbard is only very rarely logged here.Anyone got more at that time?
Thanks - Dirk

Hi Dirk,

I took part in the tests that were carried out during the 1999 Eclipse, it was run by the Belgian Radio Amateur Radio Society (UBA) and a Belgian Observatory.
They put a beacon on the 160, 80 and 40 Metre ham bands, and created a piece of
software (similar to the one used now for monitoring the 5 MHz beacons). The idea was to leave it running for 24 hours and record any changes in propagation
both before, during and after the partial eclipse.

Then, as now, it was around 80% coverage of the Sun in this part of England, but it was very clear to see that as the skies started to darken, the propagation
changed and became a lot more like the sort we get around dusk every evening. The software showed a very noticeable peak in the two beacon traces, and many MW DXers reported that stations in Spain became audible for a time.

Since this Eclipse should have about the same coverage here I would expect some interesting conditions again, so it would certainly be well worth monitoring 490 and 518 at those times.

Participants in the 1998 experiment all received a very nice certificate for taking part, I still have mine on the shack wall, but I haven't heard of any similar experiments being planned for this one yet.

A search through my logs from that time show the following:

11/08/1999 2000 3522.50 ON4UBA Southern
Belgium JO11qb BEL
11/08/1999 1100 7012.50 ON4UBA Southern
Belgium JO11qb BEL

"ON4UBA/B ------14 sec-----" (Eclipse Monitoring Beacon)

(I wasn't able to hear the Top Band beacon)

The 7 MHz beacon was audible here during daylight hours, but the 80 Metre one, which was only audible in the evenings, appeared with a fairly strong signal when the eclipse was taking place.

I still have the software somewhere somewhere around, but I don't know if it would run on Windows 7 now, if I can remember what I did with it I might have a play with it though!:-)

A Google search found the following reports about the experiment:

http://www.astrosurf.com/luxorion/qsl-eclipse-d-layer.htm

http://users.belgacom.net/hamradio/experiment.htm

This copy of QST carries an article about the experiment by the organiser of the monitoring event. Apologies for the very long link, it's well worth reading though:

Hello all,

Dirk, as you can see in the log below, I had excellent decodes at the time you mentioned.
The last few weeks Alger often overrun Bodo, which is a bad sign in winter.
However, the last few night Alger has not popped up.

On an other note, my 518 kHz instance of YaND stopped at 04:12 UTC.
The "Data" LED" was flashing but nothing was decoded.
I could not close YaND and had to go to "taakbeheer" to stop it.
This is the first time ever that I have run into a problem with YaND!
After a restart it worked flawlessly once more.

Hello Dirk, Alan,

At the time I was not yet involved with LF reception.
However, I followed the eclipse on 80 m.
So after the start the band changed and Italian CW stations could be heard just like in the evening. This indicates that the D-layer disappeared very quickly.
After the event the band went to normal in no time!

Now we have SDR technology available, it will be a nice idea to make a full recording from 0 -
1600 kHz. The effects can then be studied at leisure!

73,
Roelof Bakker

Hi Roelof,
Thanks for that, I expected it to be something like that.All Norwegian Navtex transmitters are centrally administered/remotely controlled from Bodo.So I guess if no messages are in the queue for Svalbard, they can re-arrange the schedule and have Bodo start earlier.
I have noticed similar things with 01H Bjuroklubb, 01I Varberg and 01J Gislovshammar, all in adjacent timeslots. An example is below; the 05:20 timeslot belongs to Varberg, but Gislovshammar starts within seconds after Varberg's message ends, 9 minutes early and still in the I time slot!I'm guessing this is time slot management software at work.
Regards - Dirk

Hi Roelof,
That's strange indeed...Maybe you can find a hint in Windows' application logbook?Or an abnormal system event in the System log, just before the crash was logged in the Application logbook?
The fact that the data LED was flashing indicates that Yand was not entirely dead, and was still responding to timer events.A notorious source for nightly troubles (as reported by Yand users) is Windows' automatic software update, have you switched it off? By default it is on.

Regards - Dirk

On an other note, my 518 kHz instance of YaND stopped at 04:12 UTC.The "Data" LED" was flashing but nothing was decoded.I could not close YaND and had to go to "taakbeheer" to stop it.This is the first time ever that I have run into a problem with YaND!After a restart it worked flawlessly once more.

At 14:42 10/02/2015, you wrote:

Hi all,

Interesting radio effects were noticed on LF during solar eclipses in thepast.

Interesting article here:Solar eclipse effect onthe propagation of LF radio signals

Hi Dirk,

I took part in the tests that were carried out during the 1999 Eclipse,it was
run by the Belgian Radio Amateur Radio Society (UBA) and a BelgianObservatory.
They put a beacon on the 160, 80 and 40 Metre ham bands, and created apiece of
software (similar to the one used now for monitoring the 5 MHz beacons).The
idea was to leave it running for 24 hours and record any changes inpropagation
both before, during and after the partial eclipse.

Then, as now, it was around 80% coverage of the Sun in this part ofEngland,
but it was very clear to see that as the skies started to darken, thepropagation
changed and became a lot more like the sort we get around dusk everyevening.
The software showed a very noticeable peak in the two beacon traces, andmany
MW DXers reported that stations in Spain became audible for atime.

Since this Eclipse should have about the same coverage here I wouldexpect some
interesting conditions again, so it would certainly be well worthmonitoring
490 and 518 at those times.

Participants in the 1998 experiment all received a very nice certificatefor
taking part, I still have mine on the shack wall, but I haven't heard ofany
similar experiments being planned for this one yet.

A search through my logs from that time show the following:

11/08/1999	2000	3522.50	ON4UBA	SouthernBelgium	JO11qb	BEL
11/08/1999	1100	7012.50	ON4UBA	SouthernBelgium	JO11qb	BEL

"ON4UBA/B ------14sec-----" (Eclipse MonitoringBeacon)

(I wasn't able to hear the Top Band beacon)

The 7 MHz beacon was audible here during daylight hours, but the 80 Metreone, which was only audible in the evenings, appeared with a fairly strongsignal when the eclipse was taking place.

I still have the software somewhere somewhere around, but I don't know if it would run on Windows 7 now, if I can remember what I did with it Imight have a play with it though!:-)

A Google search found the following reports about theexperiment:

http://www.astrosurf.com/luxorion/qsl-eclipse-d-layer.htm

http://users.belgacom.net/hamradio/experiment.htm

This copy of QST carries an article about the experiment by the organiserof the monitoring event. Apologies for the very long link, it's well worthreading though:

9506. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-02-12 11:52:33 UTC
From: david
Topic: 9398 Message: 9506

Offline for a time, whilst the investigations continue into my reception issues. Things are a little better -- $01U Talinn has never been logged here before -- but still well down compared with the reception reports I see from others. Work continues.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, Argyll, IO75jv (55°54'18"N 005°14'07"W)

9511. Yet an other DGPS Decoder....?

Yahoo group: navtexdx (2015)
Date: 2015-02-13 07:20:08 UTC
From: Jean Jacquemin
Topic: 9511 Message: 9511

Hello all and Dirk ,

My apologies if this issue has already been addressed on the list
but I'm so happy with YaND and YaDD that I wonder whether
Dirk ever intended to provide us with a DGPS decoder of the
same design ...?
It would be gladly welcome !!!

Best 73

Jean Jacquemin

From: roelof@...
Topic: 9033 Message: 9513

Hello all,

The sun has been quiet last night (K=1) and solar flux dropped to 126. The band deteriorates very fast after a solar event, however when things calm down, recovery is slow!

None the less the number of DX catches is improving here.
I found a much scrambled decode from Miami, but sure enough, Miami it is!

Hello all,

NAVTEX 490 kHz log over 1500 km:

Hello Jean,
Been down that road already a few years ago, see below.
It worked, but sadly only for strong signals, totally worthless for DX.
DGPS uses MSK (Minimum Shift Keying) for modulation. This can be decoded with the 2-filter FSK frontend of Yand/Yadd, but is suboptimal.
I can't get my head around how to decently demodulate MSK.(Could be the age :0)

Subject: [navtexdx] Yet an other DGPS Decoder....?

Hello all and Dirk ,

My apologies if this issue has already been addressed on the list
but I'm so happy with YaND and YaDD that I wonder whether
Dirk ever intended to provide us with a DGPS decoder of the
same design ...?
It would be gladly welcome !!!

From: Marc Goldman
Topic: 9518 Message: 9518

Gentlemen:
Jeez I did not even know there was a YaDD... OK technical question.. What is Spectrum Lab doing to decode MSK... How is it different from the 2 filters method used for NAVTEX or SITOR etc etc..?

I use Spectrum Lab.. cheap and readily available....I open two windows. one for 100 baud and another for 200 baud.. so I dont have to switch back and forth when I encounter a 200 baud station (314 Lincoln CA around here)

some times it is interesting to have more than one decoder going simultaneously often one decoder will copy something another misses all coming from the same feed

From: Frans.Vink@...
Topic: 8939 Message: 9521

Carlo,

Just wondering: Did you receive the TA on the loop? What is the heading of the loop?

I am actually not that far from you and I am still waiting for my first TA!

Cheers,

Frans

9523. RE: [navtexdx] Yet an other DGPS Decoder....? [1 Attachment]

Yahoo group: navtexdx (2015)
Date: 2015-02-14 09:40:23 UTC
From: david
Topic: 9511 Message: 9523

Hi Dirk,

That's a pity, although I sympathise. Like others, I would have loved a package from the YaXX family.

I use DSCDecoder for DGPS. I had always assumed that it used the same decoder as for DSC. I should look at the technical documents for both, I guess, although I am well out of my competence zone ;-)

David GM8XBZ

Subject: Re: [navtexdx] Yet an other DGPS Decoder....? [1 Attachment]

Hello Jean,

Been down that road already a few years ago, see below.

It worked, but sadly only for strong signals, totally worthless for DX.

DGPS uses MSK (Minimum Shift Keying) for modulation. This can be decoded with the 2-filter FSK frontend of Yand/Yadd, but is suboptimal.

I can't get my head around how to decently demodulate MSK.(Could be the age :0)

Today I thought to have caught Vardo, verifying the message, the identifier was CL, but the rest of the message came from ...Odessa. Samsun transmitted its own messages today.

Hello Frans, recently use only my home made loop. It is a loop of 6
turns of coaxial cable for TV, resonant on 518 Khz. The azimuth is about
325 degrees.

Hello Dirk,

It is amazing that you did not receive Sept Iles.
The signal was quite stable and varied from 7 - 10 dB above the band noise. My noise floor in a bandwidth of 500 Hz is -112 dBm at the moment, which is not too bad.
I gather the signal arrives at a very low angle and just makes it to my location and not much more.

If the sun keeps quiet a few more days, we might see the return of good propagation.

73,
Roelof

Yahoo group: navtexdx (2015)
Date: 2015-02-15 07:27:51 UTC
From: carlo-studiopini&associati
Topic: 8939 Message: 9534

Ciao, the log last night over 1.500 km.
Can someone explain to Cyprus that the time slots are 10 minutes and not 20?
73 de Carlo Alberto

CARLO ALBERTO PINI IW5CAO Loc. JN53RW
VICCHIO NEAR FLORENCE ITALY.

9535. NAVTEX from Les Alpes Maritimes FRANCE 15022015

Yahoo group: navtexdx (2015)
Date: 2015-02-15 08:15:34 UTC
From: Frans.Vink@...
Topic: 9535 Message: 9535

Today's special Baku, Azerbaijan on both loop and mini whip. Can't find Baku in the database. Is there any way to add it?

Report from: Frans Vink

Vincent,

YAND does not recognize it, because Baku is not in your database. You can add it using the DBManager in the YAND folder (where the application is, not the data!). I used this page as a source:

PC Navtex - Baku NAVTEX Schedule
http://www.pcnavtex.com/Schedules/NAVAREAIII/Baku/tabid/380/language/en-GB/Default.aspx

PC Navtex - Baku NAVTEX Schedule
http://www.pcnavtex.com/Schedules/NAVAREAIII/Baku/tabid/380/language/en-GB/Default.aspx

Hi,

Forgot to mention: Station call sign is UBJ, AZE is the country abbreviation.

All,

I'll answer my own question: You can add Baku to the database using the DBManager in the YAND folder. I used this page as a source:

PC Navtex - Baku NAVTEX Schedule
http://www.pcnavtex.com/Schedules/NAVAREAIII/Baku/tabid/380/language/en-GB/Default.aspx

PC Navtex - Baku NAVTEX Schedule

Hi Roelof,
Indeed weird propagation, very frustrating...Last night Sydney popped up in the log, inbetween Den Helder and Mondolfo.But I noticed that this time Vincent did not log Sydney??
It's as if propagation has moved to the south.
Regards - Dirk

Hi Roelof, Vincent,
I misread Vincent's log...It's even weirder:
Vincent logged Sydney on 490, but not on 518.Roelof logged Sydney on 518, but not on 490.
I can't get my head around it.
Regards - Dirk

Hi Roelof,
Indeed weird propagation, very frustrating...Last night Sydney popped up in the log, inbetween Den Helder and Mondolfo.But I noticed that this time Vincent did not log Sydney??
It's as if propagation has moved to the south.
Regards - Dirk

Frans,

Baku is already in my version of the station data base.
Albeit without the call.

73,
Roelof

Hi Roelof, Frans,
I guess Frans' station database was not up-to-date.The latest version -including Baku - is available here in the group's file section:

https://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder/
Frans: if you have added Baku to the database, keep it that way.
Regards - Dirk

Hi,

My database indeed was not up-to-date. BTW in the database it says AZR as country abbreviation, I think it should be AZE AZR = Azores isn't it?

Thanks for the responses, I'll update my databases.

Frans

Frans, et al

The 'Country Code' was wrong in Alan Gale's original database. Alan sent out a correction a few weeks ago. We should all have updated our lists, in both YaND and in NavtexView.
Of course, I still can't hear Baku ;-((

As you can see from 0143 I had no logs in my list. Insteat I had a lot of UNID. And for Den Helder: it's week at my location, because it's in the 0 of the ALA.

This is what I had on 518:

```
YYYYMMDD HHMM KHz ID CALL STATION,COUNTRY DIST (Km)
-----------------------------------------------------------------
20150215 0235 518 $00? UNID 0
20150215 0236 518 $01P PBK Den Helder,HOL 120
20150215 0237 518 $03Q 9AS Split,HRV 1299
20150215 0242 518 $03Q 9AS Split,HRV 1299

Hello Dirk,

It is not as weird as you might think.
This is what I received at the time that Vincent logged VCO:

```
2015-02-15 02:51:09> ZCZC RJ-88
2015-02-15 02:51:13> 101630 U~C FEB TQT

2015-02-15 03:01:07> EE~Q~~{}HFYPJMH~~~~~~{}
```

As you see it is a much scrambled message from Limnos, probably
caused by VCO!

This is received on my omnidirectional mini-whip, but I gather that
Vincent used a loop antenna that attenuated Limnos!

73,
Roelof

I used the loop both on 490 and 518. The 490 with the Perseus and the
new Afedri for 518 for. Both receivers are connect with the ALA 1530
using a Diamon SS500 splitter.

Vincent

9555. Report from VE3EAR

Yahoo group: navtexdx (2015)
Date: 2015-02-16 14:37:36 UTC
From: John Bruce McCreath
Topic: 6963 Message: 9555

For some unknown reason my RAW LOG was nothing but a blank screen with a few dashes near the bottom of the page. However, this part got logged OK, fortunately:

```
Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter

9558. Navtex logs from W Scotland - 518 kHz

Yahoo group: navtexdx (2015)
Date: 2015-02-16 19:12:20 UTC
From: david
Topic: 9558 Message: 9558

Tried the switch to the G31DDC, which is happy to put out signals from 490 and 518 on separate channels of the same soundcard. It also lacks the spurious signals from 450kHz to 550kHz that the Cubics are producing. While I look for the source of those, the WinRadio is pressed into service. It seems to work as well as anything else.
Here is a catching up from the past couple of days

9559. YaND -- a user's question (or two)

Yahoo group: navtexdx (2015)
Date: 2015-02-16 19:28:29 UTC
From: david
Topic: 9559 Message: 9559

Hi All,

I was away from the group for some months, so I didn't see any messages that might have covered this. I tried the Yahoo Group Search, but got nowhere. So I apologise if this has been covered before.

When I have two instances of YaND on screen, is there a way I can make them look different to each other?
I realise there is the check-box that I used when I selected which frequency the log entries were allocated. But the two instances obscure parts of each other, because I don't have any screens big enough to put them side by side. [I reckon I would need about 1800 pixels width for that, and I can only go up to 1600]. If I could change the colour of a part of one display, it would make recognition easier.

And, should I be seeing things in the Operational Comment box? Mine stay stubbornly empty.

I have Release notes for v6.3, but not for v6.4. Are there answers in them?

Best Wishes
David GM8XBZ

Hello David,

As far as I know there is no way to tell.
However, when you use two instances for 490 and 518 kHz, you will need to set one to 518 kHz and the other to 490 kHz.

What I have also done is to place the YaND short cuts on the task plane next to each other. The left one is for 490 kHz and the right one is for 518 kHz. When either window is active, the shortcuts go bright and that can be used as indicator.

73,
Roelof, pa0rdt

Hi David,
Are you aware of it that Yand's application window can be resized? Just move the mouse over the upper/lower/right/left window edges; the mouse cursor will change to <-->, hold mouse down and resize as needed. Maybe this is a solution?

The "operational comment" box is meant to enter, well, operational comments : frequency, receiver or antenna settings, whatever. The text entered in the box will be added to each log record:
20150207 0505 518 $01G GCC Cullercoats,ENG 587 [PERSEUS,LOOP N/S]

(Yand will remember this entry on the next startup)
Regards - Dirk

Dirk,

Thank you. I'll try resizing the window, again. Failed before.
Finger-trouble, I guess.

Thanks for the explanation of the comment box. I'm convinced an earlier version of YaND filled in a box around that part of the screen. I was, foolishly, expecting something to appear in this one.
There are no silly questions - only silly users.

Best Wishes,
David

Hi David,

Indeed, the space was used to indicate Yand's best guess for the station ID of the current message it is decoding.

Cheers - Dirk

9568. Navtex Log from W Scotland - 518kHz

Yahoo group: navtexdx (2015)
Date: 2015-02-17 10:55:21 UTC
From: david
Topic: 9568 Message: 9568

Propagation on 518k doesn't seem to have improved as much as 490, even though there are many more signals to search for. Perhaps that is the problem, and the DX is being swamped by more local signals.

9572. Free Virtual Audio Streaming

Yahoo group: navtexdx (2015)
Date: 2015-02-17 14:54:38 UTC
From: Alan Gale
Topic: 9572 Message: 9572

Hi All,

This might be of interest to some of you. I take a daily newsletter from a website called sharewareonsale.com and they list any software which is being offered free for a limited time. Some of it is crap, but occasionally you do get some decent stuff from there, which is useful to our hobby.

Today, they have an offer which is on for 3 days, for a program called 'Virtual Audio Streaming', which is a bit like the VAC program, and which creates another entry in your soundcard settings and allows you to record any incoming signals from another Port.

You can find details of it at the link below, it might prove useful to some of you:

<http://sharewareonsale.com/s/shiningmorning-virtual-audio-streaming-freebie-sale>

It offers a free lifetime licence for this version, but if you upgrade to any newer versions you may have to pay, though you can disable the updater in the menu. The normal price is $39.95, but since you can get it for free you can at least try out its full capabilities without getting that annoying voice that the trial version of VAC gives you.

Alan.

From: Frans.Vink@...
Topic: 9576 Message: 9576

Not a bad day, although I found out the housing of my new loop antenna was not as water tight as promised by the manufacturer. Back to the drawing board, because the amplifier is behaving bizarre.

9578. Navtex logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-02-18 12:26:00 UTC
From: david
Topic: 9578 Message: 9578

Still finding the occasional station new to the log, although there are still a few stubborn absentees. I'll blame it on the crazy A-Index, so far this month.
Here are the signals that travelled more than 1000km.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, Argyll, IO75jv (55°54'18"N 005°14'07"W)
Report Created On Feb 18, 2015
Receiver(s): WinRadio Excalibur
Antenna(s): MiniWhip at 6m
Software: YaND; two instances
Report Sorted by Time

9584. Navtex log from Antwerp,BEL 20150219

Yahoo group: navtexdx (2015)
Date: 2015-02-19 20:00:07 UTC
From: Dirk Claessens
Topic: 9584 Message: 9584

Hi all,
Daily log over 1500 km.Indeed not too bad, considering Kp and Kyoto DsT.
Odessa is a rare guest here, usually wiped out by Vardo.

Regards - Dirk

Hello David.

Conditions have been appalling the last months.
We are at a solar maximum now, and it is showing in the logs.

To give an impression of how solar minimum logs looks like, below are some examples from my archive, back in 2009. Receiver was the humble Lowe HF225, antenna a top loaded wire vertical.
Those were the days....

Regards - Dirk

From: david
Topic: 9578 Message: 9595

Dirk,

Just my luck to finally have more radio-time when conditions are poor ;-(

<Happy Face> That must mean things will get better -- please.

Thanks for the software. Trying to reconstruct broken messages is very
addictive. Much more interesting than just noting that my radio received a
perfect decode.

Best Wishes
David

Hi Carlo,
Sadly no. This is a mixture of Astrakhan and Grindavik...Nuuk and Grindavik share a few identacal geographical keywords.
Regards - Dirk

The NUUK log is true?
Thanks.
Carlo Alberto

From: david
Topic: 9398 Message: 9599

Take away the locals, and there is precious little left. Like Carlo, I am tempted by messages about 'Ice Accretion', but I can't put a definite identity to their source.

9600. Navtex log from Antwerp,BEL 20150221

Yahoo group: navtexdx (2015)
Date: 2015-02-21 13:17:18 UTC
From: Dirk Claessens
Topic: 9600 Message: 9600

Hi all,
-A short fragment of San Juan could be logged.-Torshavn is back on the air.-Also note 5BA Cyprus complaining again about Antalya's illegal transmissions.

Regards - Dirk

9604. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-02-22 09:03:13 UTC
From: roelof@...
Topic: 9033 Message: 9604

Hello all,

At 00:19 UTC a message from VCK Sept-Iles,CAN was received.
However, is it a message from VCK or not as the text clearly shows
<NORWEGIAN WEATHER BULLETIN>.

The line at 00:22:10 shows the word <CABOT>, which is a keyword of
VCK. However, I wonder why this keyword overrides the keywords of
VARDO!

Dirk, I seem to remember vaguely that DX stations are weighting
,more than locals in YaND?

20150222 0019 518 $04C VCK Sept-Iles,CAN 4726

9606. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-02-22 14:49:09 UTC
From: david
Topic: 9398 Message: 9606

$03B Alger appeared in my log for the first time. Otherwise, local gales meant the DX (such as it is these days) was blotted out by frequent bulletins from the nearby transmitters.

9607. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-02-22 14:52:46 UTC
From: Dirk Claessens
Topic: 9033 Message: 9607

Hi Roelof,
I have indeed been testing IDing by distance in the situation where 2 or more messages are mixed up, but this had unwanted side effects (long story). The current version of Yand - and provided a valid ZCZC sequence is present - counts the number of keywords found for each navarea. The highest count wins.
In the Vardo/Sept-Iles message, no keywords for Vardo (as present in Yand's list) were found, but CABOT was found for Sept-Iles. I remember vaguely that a year ago or so several keywords had to be deleted for Vardo because they caused false IDs for wide area weather reports of Grindavik.(YERMAK, SVALBARD,etc..)
Regards - Dirk

Subject: [navtexdx] NAVTEX from Zealand, HOL

Hello all,
At 00:19 UTC a message from VCK Sept-Iles,CAN was received.However, is it a message from VCK or not as the text clearly shows <NORWEGIAN WEATHER BULLETIN>.
The line at 00:22:10 shows the word <CABOT>, which is a keyword of VCK. However, I wonder why this keyword overrides the keywords of VARDO!
Dirk, I seem to remember vaguely that DX stations are weighting ,more than locals in YaND?

From: stephen_qrp@...
Topic: 9612 Message: 9612

I was told yesterday of NAVTEXview.

Many of you may already know of this program...I did not, so I pass on an extract from the NDB List Datamodes Section as follows

NAVTEXview: http://www.ndblist.info/datamodes/NAVTEXvw2.3.zip - ** NEW VERSION 2.3 NOW AVAILABLE** (September 2014)
This is a wonderful little freeware utility program, developed and kindly supplied to us by Tobias Taufer (T2) from Germany, and is designed to show the scheduled NAVTEX broadcasts as they come up. This program allows the user to create a window on their desktop which will show stations which are active in 'real time', and also those that are coming up next.

Please note that in this new version 2.3 it now also includes 'NAVTEXmap', a very useful function which allows the user to see where the upcoming stations are located. We would definitely recommend it to all NAVTEX fans! Our thanks to Tobias for creating, developing and sharing this fantastic program with us. (Just unzip it to a folder and then double click on the 'NAVTEXvw.exe' icon to run it, or create a shortcut to this on your Windows desktop). Size = 749kb in a zipped file - data last updated 29th of January 2015 (using WNDB v13.2)

NOTE# - Tobias also produces another excellent program called 'EIBIview', which covers LF, MF and HF Broadcast Station Schedules, and can be downloaded from the Index Page and HERE: http://www.ndblist.info/beacons/EIBIview30.zip

You can also find the program, and download updated EIBI files from Eike Bierwirth's excellent EIBI Shortwave Broadcast website at: http://www.eibispace.de/ http://www.eibispace.de/. http://www.ndblist.info/datamodes/foobar2000.zip NAVTEXview RE-PLAYER/FOOBAR2000: - Tobias also came up with a very interesting method of re-playing pre-recorded NAVTEX signals using the Foobar 2000 player, and this creates a handy feature which can be used when the NAVTEX sound is not real-time but comes from a recorded soundfile. This will work in combination with NAVTEXview. The relative playback duration is then displayed in the titlebar (caption) of Foobar2000, making it possible for NAVTEXvw to read it and continuously calculate the true recording time, provided you remember at what time you have started your recording. Tobias says that this method may sound a bit difficult, but it's real simple in use and makes offline nighttime DXing possible at any time. (3.47MB - zipped)

Regards to all

Stephen

From: roelof@...
Topic: 9033 Message: 9615

Hello all,

Last night YaND flagged (correct) the follwoing message as from
Svalbard:

2015-02-24 04:04:01> ZCZC AA64
2015-02-24 04:04:29> 281600 UTC JAN 15~~~U~NAV BC~S~ ~~~EX~{}EB15
2015-02-24 04:04:32> NORWEGIAN NAV. WNG 202/2015
2015-02-24 04:04:34>
2015-02-24 04:04:35> CHART 77
2015-02-24 04:04:37> AREA TJELDSUNDET
2015-02-24 04:04:37>
2015-02-24 04:04:49> PIPELINE AT SURFACE MARKED WITH LIGHTBUOY OG
[RADAR] ~E~LEK~ON RB~ORTED 68-3~.2

It looks genuine, but is not.
I did rerun it from my PERSEUS overnight recording.
This message is preceded by three messages from Bodo.
At 04:04:01 UTC a much stronger station comes on,
overriding Bodo for the first and part of the second line.
Then it fades down and Bodo fades up, producing line three!
Which caused YaNF to flag it as Svalbard!

On an othe rnote,m an unusual string of 8 messages from Sydney, CAN
was received on 518 kHz. See below.

NAVTEX 490 kHz log over 1500 km:

9618. Report from VE3EAR

Yahoo group: navtexdx (2015)
Date: 2015-02-24 14:02:23 UTC
From: John Bruce McCreath
Topic: 6963 Message: 9618

This is the only DX decode that I had overnight.
Of course, I did have all the regular locals.

Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter
Antenna : Delta loop 33M a side, apex up
Decoder : YaND V 6.3
Exclude : Less than 3,000 km.
Best DX : $15K CBP, Puerto Montt, Chile

9619. Navtex log from Antwerp,BEL 20150224

Yahoo group: navtexdx (2015)
Date: 2015-02-24 15:42:31 UTC
From: Dirk Claessens
Topic: 9619 Message: 9619

Hi all,
Finally a decent night with T/A!Fundy is quite rare here.
Only a short fragment could be decoded from Miami (previous log dates back from 7th nov 2014!)Tampa Bay and Vera Cruz were mentioned, and starting time was spot-on in the 04:00 slot, and then Corsen spoiled the fun.
Regards - Dirk

Hello Dirk,

Yes, it certainly does.
It also shows that we should not take every out of the ordinary catch for granted! However, without my PERSEUS recording it should have been much more difficult to trace it down!

Looking at the time of transmission, it seems that Bodo sometimes fills Svalbard's slot!

73,
Roelof

After a few days absence, $03Q reappeared from their alternate home. Is there any indication of when they might go back to HRV?
Take away the locals, and there are only a few left :-

Hi David,
The only thing I could dig up was the name of the company that seems to do the maintenance on the Split transmitter system. No mention is made about a technical problem, or how long Mondolfo will be taking over from Split.
Regards - Dirk

http://www.plovput.hr/en/radio-service/navtex-system

After a few days absence, $03Q reappeared from their alternate home. Is there any indication of when they might go back to HRV?

Dirk,
Thank you for researching it, anyway. The link was an interesting page, even if it didn't tell much [except they have mislabelled the Transmit antenna ;-)]

Regards
David

From: John Bruce McCreath
Topic: 6963 Message: 9632

NMA, Miami, FL was very active overnight and I'm blaming
it for rather poor decodes, save for this one DX entry:

Report from : Bruce McCreath, VE3EAR

Hi David,
I have some doubt about the Svalbard logging.Time of reception is odd and totally off-schedule (although this is possible)Below is what I received at 05:21; is it possible that the J-identifier of Gislovshammar was received in error as A?Yand will come up with Svalbard in that situation, because of the NORWEGIAN keyword in the message.
Regards - Dirk

Dirk,

You might be right. I was probably careless. {And terrible at geography}.
Fortunately, I hadn't deleted the logs yet. I delete the records every day,
and start the log again.
This is what was still on the machine:

Last night I run NAVTEX on two computers with two receivers: the normal log with the Afedri (Studio 1) and a second with the Perseus (Perseus software). For the rest: both computer are the same, same Windows version, both use the same VAC version and both receivers are connected to the same antenne (ALA 1530). I received VCO on the Perseus, not with the Afedri.

Hello Vincent,
Maybe you should check Yand's calibration on the Afedri-PC?What happened to me once was that I had copied the Yand directory from one PC to another and forgot to re-calibrate.
(the correction factor is in Yand.ini, and not necessarily the same on 2 different systems. notebooks have notoriously quirky audio systems)
Regards - Dirk

I received VCO on the Perseus, not with
the Afedri.

```
20150226 0646 518 $04Q VCO Sydney,CAN                  4609
2015-02-26 06:46:28 34> ZCZC QE49
2015-02-26 06:46:31 37> 260650UTC

Hi David,
Yes, classical example of header corruption leading to false ID's.Svalbard is quit hard to catch, so far up north.
Due to winter conditions, the station is also not very active, I have collected a few dozen of the message below in my archive:
2013-01-23 20:00:16 38> ZCZC AE50
2013-01-23 20:00:18 35> 232000 UTC JAN 13
2013-01-23 20:00:27 40> NO MESSAGES ON HAND FROM SVALBARD / BODOE RADIO/LGP.
2013-01-23 20:00:28 41> NNNN
Regarding geography. In the directory below, there is a Google Earth KMZ file containing all Navtex stations of the world (known to me). Maybe this is helpful.
https://groups.yahoo.com/neo/groups/navtexdx/files/Members%20Files/DIRKCL/
 Regards - Dirk

  Dirk,

You might be right. I was probably careless. {And terrible at geography}.
Fortunately, I hadn't deleted the logs yet. I delete the records every day,
and start the log again.
This is what was still on the machine:

Topic: 9578 Message: 9642

I really enjoy the detective work in going through the UNID's, to see if the human eye can spot patterns and clues that software skips over. Until now, I have been much more trusting of YaND's opinion than perhaps I should. If YaND was sure, I didn't argue. Obvious errors that couldn't possibly have been true, I rejected. But, in this example, I didn't know any better ;-((

Although I now live in Scotland, I spent my first 60 years in England. The English, as you all know, are very insular. If it wasn't in the Empire, we weren't taught about it. [My atlas -- published in the 1950s -- really did have (our) half the world shaded in red]. We also have an appalling grasp of other languages. I'm not proud of any of this, but it has made some things difficult in my older age as I try to catch up.

To use Navtex as an example, I simply don't recognise a lot of the give-away words and expressions that clearly identify stations. I really like the database page in YaND, and I find it helpful. But what narrowly educated people like me need is a reference book. Each station would have an entry, that would include sample messages (because the format is sometimes a clue), as well as key locations that the station covers regularly. Also, any technical clues. For instance, some stations start off a broadcast session with a carrier tone, others with a Mark tone. I have never seen a Space tone used as a tune-up -- are there any?
If I can find the sample messages, I will start to produce such a document. Dirk's KMZ file is helpful, and I have used Tobias' map in Navtexview too, but I need all these clues pulled together. I wonder if it would be any use to those of you with a wider view?

Thanks
David GM8XBZ

From: John Bruce McCreath
Topic: 9578 Message: 9644

> I wonder if it would be any use to those of you with a wider view?

That sounds like a great idea to me. You fellows on the other side of the pond have a totally different situation compared to we here in North America. If you decode a station at a distance over say 1,000 km., it can be from a number of different countries, while we need to go over 2,000 km. just to get off the continent. I envy the diversity you chaps have over there. One of the things I look forward to is checking the reports you've filed and seeing if you've had any TA decodes. I've yet to log one myself, but I know it's possible with my setup, as I've had WSPR decodes on 474.200 kHz. from several EU countries.

Cheers, Bruce McCreath, VE3EAR

9645. Can I modify YaND logs

Yahoo group: navtexdx (2015)
Date: 2015-02-27 14:22:09 UTC
From: david
Topic: 9645 Message: 9645

Here is an example of what I mean. I get this in the log screen:

```
2015-02-26 22:49:52> ZCZC RL64
2015-02-26 22:49:54> CENCOMAR
2015-02-26 22:49:57> 262105 UTC FEB 15
2015-02-26 22:50:00> ~,-=.(WARNING NR 0-99/15
2015-02-26 22:50:06> ~0~45~&-)-[CONTINENTAL] PORTUMAL
2015-02-26 22:50:09> ~DUEU~O SE~VIC~TCONSTRAINTS
2015-02-26 22:50:13> ~RO~A CONTROL RS ~OT HANDLING
2015-02-26 22:50:31> ~COPREP VH~ E~COS~~ACPT~~~~AC~~~QK~{}~~J~~ZC~C
RA9~?262250 ~TC FEB15
2015-02-26 22:50:33> ~LA MADDALENA~RADIO
2015-02-26 22:50:33>
2015-02-26 22:50:37> COASTAL WARNING NR. 030/15
2015-02-26 22:50:43> EASTERN [SARDINIA] - CAQO SAN L~RENZO
2015-02-26 22:50:50> MY COASTAL WARNING NR. 021/15 IS DELETED.
2015-02-26 22:50:51> NNNN
```

There are two transmissions running in to each other. At 22:50:31, there is the start of a definite message from La Maddelena. YaND logs this as:
20150226 2249 518 $03R ICH La Maddalena,SA,ITA 1950

which is incorrect. The 2249 transmission is Portuguese. Of course, I can edit the report that left-clicking produces. But I wonder if there is a way of either splitting a message so that the software picks the correct part, or of editing the time in the log in the same way as I can edit the B1 and Navarea entries.

{In this case, I had a full decode of the next message, so I marked this one as UNID. But the question arises for more complicated message mix-ups}

David GM8XBZ

9649. Re: [navtexdx] Can I modify YaND logs

Yahoo group: navtexdx (2015)
Date: 2015-02-27 15:54:14 UTC
From: Dirk Claessens
Topic: 9645 Message: 9649

Hi David,
Yand found 2 keywords for 3R La Maddalena: SARDINIA and MADDALENA, but only one for 2R Penalva: CENCOMAR, hence the choice for 2R.You can enforce/override Yand's choice by changing the B1 and/or B2 fields (see the manual)(But note that this will not work when a unique ID was detected, such as ISTANBUL TURK RADIO)

Splitting up messages is only possible by directly editing the database with dbmanager.Cut/paste data, adding a new record, time-stamping,etc..Note that dbmanager is a bulldozer tool and will never ask "are you sure?" questions. :o)

Regards - Dirk

9651. RE: [navtexdx] Can I modify YaND logs

Yahoo group: navtexdx (2015)
Date: 2015-02-28 10:13:34 UTC
From: david
Topic: 9645 Message: 9651

Hi Dirk,

I have never ventured into dbmanager territory. I'm dangerous enough with YaND itself. But I WILL take a look, and perhaps try it out on a copy of something disposable. I last wrote database software when Delphi was at version 2. Things have become a lot more complicated since then.

Regards
David

Topic: 9578 Message: 9652

Not much, again, although $03R Limnos had been absent from the log for some time and then last night produced a whole bunch of messages.
Frequent "Important" messages from locals, out of schedule, corrupt messages that might have been that desirable DX signal. <sigh>

9655. Re: Station Identification: WAS RE: [navtexdx] Navtex logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-02-28 15:53:07 UTC
From: Dirk Claessens
Topic: 9578 Message: 9655

Hello David,
Interesting idea, a Navtex Vademecum.In case you haven't discovered it already, the directory below contains Google Earth images about antenna locations, satview and/or streetview. Maybe this is useful. Spotting antennas can be tough, except when the image was taken at a low sun angle, casting long shadows.

https://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Guides/Navtex%20Antenna%20Locations/

I guess the Mark tone as starting tone is a convention taken from RS232 modems. There the line is in Mark (=high = binary 1) when no data are to be sent.The first start bit causes a transition to the Space/low/binary 0 state.
There are few other station peculiarities I have noticed over the years.-Ostend Radio (and one other Scandinavian station, forgot which) start their transmissions with a data/time line just prior to the first ZCZC.
- Some stations end their transmission with a End Of Transmission signal, others don't. Pinneberg sends a EOT signal after each message. You can check this behavior in Yand's system log ('end of transmission detected')
- Weather reports from USCG stations typically put...dots...inbetween...sentences. No other stations do this.

- My Yand database goes back 7 years. If you need sample messages, just ask.
Regards - Dirk

Subject: Station Identification: WAS RE: [navtexdx] Navtex logs from W Scotland

I really enjoy the detective work in going through the UNID's, to see if the human eye can spot patterns and clues that software skips over. Until now, I have been much more trusting of YaND's opinion than perhaps I should. If YaND was sure, I didn't argue. Obvious errors that couldn't possibly have been true, I rejected. But, in this example, I didn't know any better ;-((

Although I now live in Scotland, I spent my first 60 years in England. The English, as you all know, are very insular. If it wasn't in the Empire, we weren't taught about it. [My atlas -- published in the 1950s -- really did have (our) half the world shaded in red]. We also have an appalling grasp of other languages. I'm not proud of any of this, but it has made some things difficult in my older age as I try to catch up.

To use Navtex as an example, I simply don't recognise a lot of the give-away words and expressions that clearly identify stations. I really like the database page in YaND, and I find it helpful. But what narrowly educated people like me need is a reference book. Each station would have an entry, that would include sample messages (because the format is sometimes a clue), as well as key locations that the station covers regularly. Also, any

technical clues. For instance, some stations start off a broadcast session with a carrier tone, others with a Mark tone. I have never seen a Space tone used as a tune-up -- are there any?
If I can find the sample messages, I will start to produce such a document. Dirk's KMZ file is helpful, and I have used Tobias' map in Navtexview too, but I need all these clues pulled together. I wonder if it would be any use to those of you with a wider view?

Thanks
David GM8XBZ

Subject: Re: [navtexdx] Navtex logs from W Scotland

Hi David,

Yes, classical example of header corruption leading to false ID's. Svalbard is quit hard to catch, so far up north.

Due to winter conditions, the station is also not very active, I have collected a few dozen of the message below in my archive:

2013-01-23 20:00:16 38> ZCZC AE50
2013-01-23 20:00:18 35> 232000 UTC JAN 13
2013-01-23 20:00:27 40> NO MESSAGES ON HAND FROM SVALBARD / BODOE RADIO/LGP.
2013-01-23 20:00:28 41> NNNN

Regarding geography. In the directory below, there is a Google Earth KMZ file containing all Navtex stations of the world (known to me). Maybe this is helpful.

Once again, what small amount of DX might have made it through the ionosphere was lost under the deluge of storm- and gale-warnings from the locals. Take them away, and the log becomes very short.

Topic: 9033 Message: 9659

Hello all,

David, below is an other riddle that requires a bit of out of the box thinking:

20150228 2357 518 $00A UNID 0
2015-02-28 23:57:44> ZCZC AE89
2015-02-28 23:57:49> MALIN HEAD COAST GUARD STATION A
2015-02-28 23:57:50>
2015-02-28 23:57:50>
2015-02-28 23:58:00> ISSUED BY THE MET OFFICE AT 0001 UTC ON SUNDAY 01 MARCH 2015
2015-02-28 23:58:13> INSHORE WATERS FORECAST TO 12 MILES OFFSHORE FOR THE PERIOD 0000 UTC SUNDAY 0
2015-02-28 23:58:19> 1 MARCH TO 0000 UTC MONDAY 02 MARCH 2015
2015-02-28 23:58:22> GENERAL SITUATION

This is clearly a message from Malin Head, however the header ZCZC AE89 does not fit at all as malin Head uses ZCZC Qxxx on 518 kHz. Though it is not impossible that the header might be screwed up, time of transmission does not fit either.

In this case the box is 518 kHz.
When we take NAVTEX 490 kHz into account, the riddle is not too difficult to solve.

On 490 kHz Malin Head uses the header ZCZC Axxx and the time slots are 00:00 UTC + n x 4 hour (n = 0 to 5).
Malin Head starts its transmission about two minutes early, so the 00:00 UTC transmission will start at about 23:58 UTC.
So it looks like the 490 kHz transmission has been transmitted on 518 kHz.

I have checked this on 490 kHz. ICI, Sellia Marina, ITA ended its last transmission at 23:49:31 UTC. The next transmission, OST, Ostend, BEL, started at 00:10:36 UTC. The channel was clear during Malin Head's time slot, however nothing was received.

Daily log:

9661. Malta interfering with Malin Head

Yahoo group: navtexdx (2015)
Date: 2015-03-01 19:25:22 UTC
From: Dirk Claessens
Topic: 9661 Message: 9661
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all,
I have never observed this before: an off-schedule transmission from Malta Radio causing strong interference with Malin Head. Distances from my QTH are 908 km (Malin) and 1900 (Malta). Note the signal quality sudden decrease at 18:21:28, then slowly decreasing to almost zero at 18:22:30. I'm guessing that the true cause for the interference was not that propagation has caused Malta to become stronger, but Malin Head to become weaker, because of the ground wave/sky wave signals cancelling each other. This phenomenon is mostly occurring 1..2 hours after sunset.
Regards - Dirk

Hello Dirk,

It did not happen, at least not interfering with Malin Head.
What is even more weird is that Malta interfered with Portpatrick
transmitting a message containing the word <MALIN>.

9666. Re: [navtexdx] navtex from Italy, near Florence

Yahoo group: navtexdx (2015)
Date: 2015-03-02 08:58:03 UTC
From: Nicola Rizzi
Topic: 8939 Message: 9666

Ciao,
ricevo spesso anche qui in Puglia VCO dal Canada, credo con lo stesso
balun, ma con antenna molto più corta. L'hai allungata apposta per ricevere
sotto il mhz?
Grazie.

9667. Re: [navtexdx] navtex from Italy, near Florence

Yahoo group: navtexdx (2015)
Date: 2015-03-02 09:18:26 UTC
From: Carlo - Studio Pini & Associati
Topic: 8939 Message: 9667

Hello Nicola, currently use a loop in coaxial cable tuned 518 Khz.
Carlo Alberto

Foristell, Missouri

Chile made another appearance last night. Bermuda was very poor copy but new for
the month. Conditions not very good otherwise. Canada mostly missing again.

2015-03-02 0431 518 $04B Bermuda Harbour, Bermuda
2015-03-02 0434 518 $15D Puerto Montt, Chile

9671. Navtex log from Antwerp,BEL 20150302

Yahoo group: navtexdx (2015)
Date: 2015-03-02 19:28:51 UTC
From: Dirk Claessens
Topic: 9671 Message: 9671

Hello all,
At first I had some doubts regarding the Saudanes logging, but then I noticed it was an off-schedule transmission. In it's normal time slot, Saudanes is pushed under by Mondolfo and Penalva at my QTH.

Regards - Dirk

```
QTH            : South of Antwerp, Belgium
Locators       : 51.07.23N 04.28.03E [JO21je]

From: Mike Thayne
Topic: 8928 Message: 9675

Hello All,
Just an occasional log for over 1500km. Not much going on here!!

Best regards,
Mike, g3gms

9677. Yand message display

Yahoo group: navtexdx (2015)
Date: 2015-03-03 17:11:39 UTC
From: Mike Thayne
Topic: 9677 Message: 9677

Hi Dirk,

Something strange has happened to the text of messages in both the Spectrum and Log pages of Yand.

The text looks like it has been produced by a printer running out of ink, weak with imperfect characters.

Happily the running text display and "now receiving" boxes are perfect, as also are all program headers etc. It is only log messages which are troubled.

Saving logged messages to folder also gives the same imperfect characters. Fortunately when I copy and paste these into email for sending to the group all is correct and good copy is given.

I guess this is probably a Windows problem but please, any ideas which might help will be wonderful, it is hard work trying to read the messages.

Windows Vista is my operating system and Yand 6.3 which has been in use a long time.

Cheers,
Mike, g3gms

Hello Mike,
Gremlins at work! :0)The only common factor I can see is that all windows showing the problem use the "Courier New" font.This is a very common font and is normally installed in Windows since version 1.0.If Windows cannot find a requested font, it will "do its best" and choose a font that it thinks resembles the requested font. This can give horrible effects.

I'm guessing some rogue program has uninstalled or corrupted it??As a check: run Notepad, click Format, check if Courier New is in the fonts list.If it is, select it, type some characters and see what happens.If it is not, the font was deleted somehow.
Regards - Dirk
P.S. can you post a screenshot? Maybe this gives more hints.

Attachments: 2 described; binary payloads are missing from this source WARC

Hello Dirk,

Thank you. I checked Notepad which is using the "Courier New" font and showing exactly the same corruptions as seen in Yand. Changing the font in Notepad to "Arial " gives perfectly correct display in that font.

Yand must be looking direct at Windows Font so changes to Notepad font does not effect Yand display.

So you are correct and the Windows font "Courier New "has become corrupt.

Please, do you know how I might be able to replace the Windows Font to return to normal.
2 screen shots as you requested.

Regards,
Mike

Mike,
I found it after some googling.
There was a problem with the latest security update from MS (KB3013455), specifically affecting Vista and W2008. Symptoms are exactly as you described: blurred Courier font (and possibly others)A fix (KB3037630) is available here:

http://support.microsoft.com/kb/3037639
The site was heavily overloaded when I checked it; patience may be needed.

Regards - Dirk

So you are correct and the Windows font "Courier New "has become corrupt. Please, do you know how I might be able to replace the Windows Font to return to normal.2 screen shots as you requested.

9683. Re: [navtexdx] Yand message display

Yahoo group: navtexdx (2015)
Date: 2015-03-04 15:31:14 UTC
From: Don
Topic: 9677 Message: 9683

Hello Dirk,

Thanks for the info! I was not having a problem with YaND but
Thunderbird and Excel. I checked MS a few weeks ago but found no fixes
available.

Hello Dirk,

The symptoms all fit I did have a recent security update KB3013455 and this Font trouble does follow on from there.

My patience has been rewarded, download as you gave me in your link finally done and all is working perfectly again.

Such joy and bliss, thanks to your great help, Dirk.

Kindest regards,
Mike, g3gms

Subject: Re: [navtexdx] Yand message display

Mike,

I found it after some googling.

There was a problem with the latest security update from MS (KB3013455), specifically affecting Vista and W2008. Symptoms are exactly as you described: blurred Courier font (and possibly others)
A fix (KB3037630) is available here:

http://support.microsoft.com/kb/3037639

The site was heavily overloaded when I checked it; patience may be needed.

Regards - Dirk

□
Hello Dirk,

Thank you. I checked Notepad which is using the "Courier New" font and showing exactly the same corruptions as seen in Yand. Changing the font in Notepad to "Arial " gives perfectly correct display in that font.

Yand must be looking direct at Windows Font so changes to Notepad font does not effect Yand display.

So you are correct and the Windows font "Courier New "has become corrupt.

Please, do you know how I might be able to replace the Windows Font to return to normal.
2 screen shots as you requested.

Hello Frans,

Talinn is not rare here, but rather irregular.
This is due to "interference" from IQM, Mondolfa, ITA.
Yesterday IQM transmitted a long weather forecast from 19:20 to
19:25 UTC and after that stopped. I found four perfect decodes from
Tallinn between 19:25 and 19:30, which does not happen too often!
I gather this gave a chance to hear it in southern France as well!

Daily log:

Topic: 9578 Message: 9695

Lots of clear decodes from around the 2000km range. And groundwave up to 400km or so. But little in between. And certainly nothing beyond.

Session Report for David Atkins, GM8XBZ

Hello All,

Very good reception from the East last night with lots of multiple messages in full. Looks promising but nothing from across the pond out west, yet.

Regards,
Mike, g3gms

9702. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-03-07 10:40:12 UTC
From: david
Topic: 9398 Message: 9702

This morning I discovered that my '24/7' mini-whip was drawing erratic supply current. I swapped connections to another one, and the draw is now a constant 50mA. The sdr spectrum display suddenly looks a lot cleaner, and local signals have improved. When the rain and gales cease, I'll take the suspect antenna down and cut the housing open to see if there is anything obvious.
This is certainly not the only reason for poor DX performance. We have a noisy electricity supply system through overhead poles and local transformers, and there are PLT systems and mains-connected alarms in several houses nearby. However, it was something within my control and I shall have to find a way of monitoring antenna performance, besides constant attendance. Time will tell if reception improves with the alternate mini-whip.
In the meantime, here is the very short log of discernable signals over 1200km.

Session Report for David Atkins, GM8XBZ

From: Guillaume Perron
Topic: 9703 Message: 9703

Happy to provide some logs from last night. For some reason the usual noisemakers in my neighborhood were absent last night, providing an opportunity to spend some time on 518kHz. Prescott is a new one to me for a nice surprise.

Cheers,
Guillaume VE2SWX

QTH: Montreal, QC, CAN, FN35en (45.54N, 73.60W)

9704. Navtex logs from Whitley Bay ENG

Yahoo group: navtexdx (2015)
Date: 2015-03-07 14:28:52 UTC
From: Mike Thayne
Topic: 6042 Message: 9704

Hello All,

Logs over 1500km last night. 2 messages from VCO Sydney, so nice for me to receive T/A again.

Regards,
Mike, g3gms

9707. NAVTEX from Les Alpes Maritimes FRANCE 08032015

Yahoo group: navtexdx (2015)
Date: 2015-03-08 08:44:17 UTC
From: Frans.Vink@...
Topic: 9707 Message: 9707

At 0329 two receivers/antennas of mine received a sentence "SAN JUAN CARIBBEAN WATERS".
Could this be my first ever TA?

Report from: Frans Vink

Topic: 9707 Message: 9708

Hello Frans,

Yes, this will certainly be from NMR, San Juan, PTR.
Albeit the assigned timeslot runs from 03:00 UTC to 03;10 UTC, most of the times the string of messages will last more than 30 minutes.

Weird enough, I did not receive anything at all from NMR last night!

Daily log:

Hello all,

Hello Frans,

Regarding San Juan. I received a very fragmented message (see below) in which I can see the words "CARIBB-AD W" and "seas 7 to 8FT" and thats about all. Not enough for me to claim but nice to see your RAW log to help the ID process. Congratulations on your first T/A decode.

Regards,
Mike, g3gms

Topic: 9398 Message: 9710

Domestic chores mean a pause in the relocation of the substitute antenna. In the interim, at least reception is better than with the intermittent one.

Hello All,

Please can anyone confirm this message is good for my claim from Bangkok Radio Thailand. Time slot is correct. Seems hard to believe!

Hello Mike,

I believe this message is genuine.
My best catches from that part of the world on 518 kHz were shortly after the autumn solstice. At the moment we are in the same situation in regard to the spring solstice.

Also the path is in complete darkness at 21:00 UTC.
There were no other stations active at the time.

Congratulations!

73,
Roelof

Hello Roelof,

Many thanks for your affirmation on Bangkok.
Lets hope we get a repeat showing tonight again on a clear channel. Last night GCC Cullercoats, with antennas located 2km from me, started scheduled transmissions just 30 seconds after I received the message from Bangkok, fortunately the never start early.

Best regards,
Mike
